DOCUMENT TITLE: GOES-R Series Ground Segment Project Functional and Performance Specification			
VERSION	DATE	PAGES AFFECTED	DESCRIPTION
1.0	13 May 08	All	Final
1.1	20 May 08	Appendices A&D	Revision (CCR-01245)
1.2	10 Jul 08	Appendix A, Table 2	Revision (CCR-01263)
1.3	27 Aug 08	Appendices A-D	Revision (CCR-01276)
1.4	23 Sep 08	pp.19, 24, 43, 52, 55, 68	Revision (CCR-01282, CCR-01285, CCR-01286, CCR-01288)
1.5	29 Oct 08	pp. 13, 14, 16, 68, 69, 83, 112	Revision (CCR-01292, CCR-01305, CCR-01313)
1.6	21 Nov 08	pp. 8, 10, 14, 60, 65, 67, 69, 77, 95, 107	Revision (CCR-01290, CCR-01326, CCR-01328, CCR-01329, CCR-01330)
1.7	15 Dec 08	pp. 12, 13, 14, 42, 65, 68, 69, 72, 73, 75, 81, 82, 103, 104, 106, 110, 111, 115	Revision (CCR-01291, CCR-01304, CCR-01333, CCR-01334, CCR-01341, CCR-01352)
1.8	29 Jan 09	pp. 9, 70,83, 112	Revision (CCR-01365, CCR-01366, CCR-01368)

The document version number identifies whether the document is a working copy, final, revision, or update, defined as follows:

- **Working copy or Draft:** a document not yet finalized or ready for distribution; sometimes called a draft. Use 0.1A, 0.1B, etc. for unpublished documents.
- **Final:** the first definitive edition of the document. The final is always identified as Version 1.0.
- **Revision:** an edition with minor changes from the previous edition, defined as changes affecting fewer than one-third of the pages in the document. The version numbers for revisions 1.1 through 1.9, 2.1 through 2.9, and so forth. After nine revisions, any other changes to the document are considered an update. A revision in draft, i.e. before being re-baselined, should be numbered as 1.1A, 1.1B, etc.
- **Update:** an edition with major changes from the previous edition, defined as changes affecting more than one-third of the pages in the document. The version number for an update is always a whole number (Version 2.0, 3.0, 4.0, and so forth).

GSFPS-2344	8.2	The GS shall acknowledge receipt of data requests within ten seconds (10 seconds) (TBR).	
GSFPS-2382	8.3	The GS shall accommodate concurrent transfers of product files to 100 (TBR) ad hoc users through the GOES-R Access Point.	
GSFPS-2916	8.3	The GS shall begin transfer of any requested and available product from the GOES-R Access Point to the requester within five (5) seconds (TBR) of ad hoc request validation.	
GSFPS-2428	8.4	The GS shall process a minimum of 200 (TBR) simultaneous subscription service data transfers.	
GSFPS-3137	8.4	The GS shall be capable of transferring data from the GOES-R Access Point to users at a minimum combined rate of 500 Mbps (TBR).	
GSFPS-3153	8.4	The GS shall transfer data from the GOES-R Access Point to users at a minimum combined rate of 500 Mbps (TBR).	

1 INTRODUCTION

1.1 Background

The next generation Geostationary Operational Environmental Satellites (GOES), designated the GOES-R Series, are required to provide continuity and improvement of remotely-sensed environmental data from a geosynchronous orbit in the 2014-2028 era. The GOES-R Program, which has the responsibility to acquire and implement the GOES-R mission, is being implemented through the GOES-R Ground Segment Project (GSP) and the GOES-R Flight Project. The GSP will acquire the integrated, distributed GS that will conduct satellite operations and instrument product generation and distribution. Details about the GOES-R conceptual architecture, functionality, and operations are documented in the reference GOES-R Program Concept of Operations (P417-R-CONOPS-0008).

1.2 Scope

This document, together with all GOES-R GS Interface Requirements Documents (IRDs) (see Ground Segment Applicable and Reference Documents List (G 417-R-LIST-0165)) and the Ground Segment Mission Assurance Requirements document (G 417-R-GSMAR-0068), specify the functional and performance requirements with which the GS **shall** comply.

Sections 4 through 8 of this specification contain the high level functional and performance requirements for the GS portion of the GOES-R Series System. The column headings of these sections indicate the GSP DOORS ID Number, the contract option number, and the developing organization responsible for each requirement, and the requirements.

The requirements in Sections 4 through 8 of this document are allocated to developing organizations that are providing the functionality described by each requirement.

The developing organization column next to each requirement could denote OSD, OSO, the Algorithm Working Group (AWG), the GS Contractor (GS Ktr), or ALL to allocate the requirement to one of the major development organizations or to all organizations (ALL).

The Option column next to each requirement denotes Base, 0001, or 0002 to allocate the requirement to the baseline contract, or to one of the 2 options.

1.3 GOES-R Mission Objectives

- a) To maintain GOES mission continuity and quality in environmental observations in the 2014-2028 timeframe
- b) To provide enhanced environmental data products
- c) To improve services and data being provided to Users
- d) To be responsive to technology infusion to meet evolving User needs

1.4 Specification Derivation

The GOES-R Series Level I Requirements Document (LIRD) (P 417-R-LIRD-0137) levies NESDIS requirements on the GOES-R Program. The Mission Requirements Document (MRD) (P417-R-MRD-0070) captures the program - level system requirements and allocates a subset of those to the Ground Segment Project. The Ground Segment Functional and Performance Specification (GS-F&PS) (417-R-FPS-0089), and other requirements documents (e.g., IRDs) define derived GS level requirements. Parallel documents, the GOES-R Spacecraft Functional and Performance Specification (S-F&PS) (P 417-R-PSPEC-0014), and its associated IRDs exist for the Space Segment.

1.5 Traceability

This document is configuration controlled within the GOES-R GSP DOORS database. Requirements traceability is maintained within that database.

2 DOCUMENTATION

2.1 Order of Precedence

Any inconsistency in this solicitation or contract **shall** be resolved in accordance with Contract Clause 52.215-8 Order of Precedence.

Any inconsistency in other documents, exhibits, and attachments **shall** be resolved by giving precedence in the following order:

- a) The Statement of Work
- b) The Functional and Performance Specification
- c) The Interface Requirements Documents
- d) Other exhibits and attachments included in Section J
- e) The Applicable Documents
- f) The Reference Documents

Terminology applicable to this GS-F&PS is documented in the GOES-R Series Acronym and Glossary Document (P417-R-LIST-0142). In the event of conflict between terminology in this handbook and any other dictionary, the GOES-R terminology **shall** take precedence.

The full lists of applicable and reference documents, with associated document number and date of issue for each, are maintained in the Ground Segment Applicable and Reference Documents List (G 417-R-LIST-0165).

Applicable documents are Government prepared and controlled documents and industry standards documents.

Reference documents amplify or clarify the information presented in this document.

In the event of any unresolved conflict, the Contractor **shall** request conflict resolution by the Contracting Officer.

2.2 Declaration of Requirements

The following requirements terminology is used throughout this document:

- a) The term "**shall**" **shall** be interpreted to mean that the function, service, or capacity described is a mandatory requirement for the GS.
- b) The terms "**shall** provide the capability," "**shall** have the capability," "**shall** be capable," "**shall** enable," "**shall** permit" and "**shall** allow," **shall** be interpreted to mean that the function, service or capacity described is a mandatory requirement for the GS, but that the capability, service or capacity may not necessarily be exercised continuously (e.g., event driven, operator selected, operator initiated).
- c) The term "*should*" designates a desired level of performance the Government would like to achieve.
- d) All other declarative statements, including use of the term "*will*", only designate statements of fact or intentions of the Government and are not to be interpreted as contractor requirements.
- e) The term "*(TBS)*" means, "to be supplied", identifies missing or incomplete information, values, or data needed to fulfill a requirement.
- f) The term "*(TBD)*" means "to be determined", identifies a missing requirement.
- g) The term "*(TBR)*", means "to be refined/reviewed", means that the requirement is subject to review for appropriateness and subject to revision.

Effective Date: Date of Last Signature
Responsible Organization: GOES-R/Code 417

G417-R-FPS-0089
Version 1.8

- h) Requirements that contain the word "satellite" (singular) should be interpreted to apply for all GOES-R series satellites operated in the multi-satellite environment, unless stated otherwise, consistent with GS overall requirement for concurrent multiple satellite operations.

Refer to the Statement of Work for Government and contractor responsibilities associated with TBSs, TBDs, and TBRs.

The satellites will be commanded throughout their mission lifetime from the NOAA Satellite Operational Control Center (SOCC) located at NSOF with the ground station radio frequency (RF) interface located at the WCDAS, or the RBU. The engineering telemetry streams are received by the WCDAS and ground relayed to the SOCC for processing and monitoring. The raw sensor data is received by the WCDAS, processed, reformatted, and rebroadcast through the GRB transponder.

The raw sensor data are received by the WCDAS, processed by the PG function at the WCDAS to create L1b and some L2+ products, and rebroadcast through the GRB transponder. The GRB data are then received at the NSOF where the PG function will create the rest of the L2+ products. The L1b and L2+ products are then either sent directly or made available to users. At the RBU the raw sensor data will be received through its RF interface and processed by the PG function at the RBU. The RBU will be limited to the production of data to support distribution via GRB and the production of KPPs.

The GOES-R Series system will provide the following unique payload services (UPS):

- a) EMWIN/LRIT: EMWIN is a service that includes watches, warnings, forecasts, graphics, and other hydro-meteorological products provided by the National Weather Service (NWS). The LRIT data stream is comprised of satellite imagery, DCS products, derived products from GOES and Polar programs, and weather analysis and forecast maps from the NWS. OSD creates and merges the data streams (one for each of GOES East and GOES West) and provides to the GOES-R GS as an Intermediate Frequency (IF) signal for uplink.
- b) DCS: The GOES DCS is a relay system used to collect information from earth-based platforms. These platforms transmit an electronic signal, containing the environmental data observed by the sensors on the platform, at predefined wavelengths and times. The transponder on board the GOES-R satellite will detect this signal, and then continuously rebroadcasts it so that it can be picked up by the ground equipment only located at the WCDAS.
- c) SARSat: The GOES SARSat transponder will receive emergency beacon transmissions for relay to ground stations responsible for search efforts.

The GOES-R series will support the transmission of GOES-R data in the emulated GVAR (eGVAR) format to facilitate the GOES user transition from GOES-N to GOES-R. eGVAR contains GOES-R data products packaged in the legacy GOES-N GVAR format and is transmitted to the GOES-N Ground System for broadcast.

The GOES-R GS will directly provide GOES-R data to the Advanced Weather Interactive Processing System (AWIPS). AWIPS is a computer workstation and communication network that serves as the nerve center of operations of all NWS Weather Forecast Offices (WFO) and NWS River Forecast Centers (RFC). Currently, the GOES-N system does not have its own interface to AWIPS. Instead, the Environmental Satellite Processing Center (ESPC) provides GOES data to the AWIPS. Unlike the GOES-N Ground System, the GOES-R GS will have the capabilities to interface with AWIPS.

GOES-R will employ CLASS services to provide archive services for GOES-R data. CLASS provides the archive and access services for the collection, archiving and dissemination of environmental data collected by a variety of in situ and remote sensing observing systems.

3.2 GOES-R Ground Segment Requirements Functional Decomposition

The GOES-R GS requirements fall into four primary functional categories: MM, PG, PD and EM. These categories have been defined as a basis for grouping functional attributes of the GS, and are not intended to imply an implementation of the GS. Necessary interface and support functions are included within the GS. The GS encompasses more than hardware and software systems, it includes the processes, services and personnel required to accomplish a set of functional tasks.

3.3 GOES-R Ground Segment Role

The details and descriptions of each of the elements of the GOES-R GS (MM, PG, PD, and EM) are provided in the GOES-R GS Concept of Operations.

3.4 GOES-R Ground Segment External Interfaces

The GOES-R Ground Segment is expected to interface to the following entities:

- a) GOES-R Space Segment
- b) GOES-R Launch Segment
- c) Unique Payload Services (EMWIN/LRIT, DCS)
- d) Ancillary Data Relay System (ADRS) (OSD)
- e) Office of Satellite Development (OSD) Comprehensive Large Array-data Stewardship System (CLASS) (OSD)
- f) Advanced Weather Interactive Processing System (AWIPS) (NWS)
- g) GOES-N/O/P Ground System for eGVAR

3.5 Government-Furnished Property

The Government will provide resources as defined in the GOES-R Government Furnished Property List.

3.5.1 Facilities

The GS facilities, including power, environmental controls, and floor space, will be provided by the Government.

3.5.2 Antennas

The GS antenna subsystem(s), including the RF equipment to the IF switch, will be provided as GFP to the GS Contractor. OSD will procure, install, and accept this equipment for the Government. Once OSD has accepted this equipment it will be turned over to the GS Contractor to integrate into the GOES-R GS.

3.5.3 Communications

Communications required for the GOES-R GS will be purchased/leased by OSO. The interface to the communications circuits at a distribution frame will be located at the communications service provider's demarcation point. Interface descriptions, circuit types, and supported data rates for connections to the circuits terminated at the distribution frame will be provided by the GS contractor to the Government. All CSU/DSUs, multiplexers, modems, and other related communications equipment on the service provider side of the demarcation point will be provided by OSO.

3.5.4 Product Distribution

The GFP portion of the PD function provides distribution of L0, L1b, L2+, and associated mission data produced by PG. The PD function will:

- a) Send data and products from PG to the GOES-R Access Subsystem
- b) Make available data and products through the GOES-R Access Point for authorized users.
- c) Store 7 days of data and products after product generation for retransmission.
- d) Send selected data, products, ancillary data, algorithms, and associated metadata to CLASS
- e) Transfer the GRB data stream from PG to MM
- f) Transfer the eGVAR data stream from PG to the GOES-N interface

The GOES-R Access Subsystem is comprised of the GOES-R Access Point and the 7-day temporary storage of the GOES-R core product set. The GOES-R Access Point is developed by OSD and is the operational user interface for ad-hoc data queries and for establishing or modifying data subscriptions or standing orders for machine to machine delivery of data via "push" or "pull" distribution. All real-time and near real-time users accessing data via the GOES-R Access Point draw their data from the temporary (7 days or less) data store. The 7-day revolving temporary storage serves as the short-term access for fulfillment of ad hoc user requests for recent historical data via the GOES-R Access Point. For the services described in this paragraph, OSDPD has an interest in moving to an enterprise-wide solution for all NOAA missions. As such they will lead the development of this part of the PD element. The ESPC will receive data via the GOES-R Access Point for further tailoring as requested by ESPC users.

3.5.5 *Scientific Algorithms*

The process for developing scientific algorithms to produce individual L1b and L2+ products (Atmosphere, Land, Ocean, and Space Weather) will require the participation of multiple organizations (instrument vendors, Flight Project, AWG, GS contractor, and the GSP). After Government review, the Government will provide individual Algorithm Packages, containing the algorithm design documents, test data, and other information, to the GS contractor as GFP.

ID	Dev. Org.	Option	Requirement
GSFPS-1150			4 GROUND SEGMENT WIDE REQUIREMENTS
GSFPS-2430			4.1 Overview
GSFPS-1152			Section 4 specifies segment-wide operational, functional, and performance requirements, which are allocated to the GOES-R GS as an end-to-end system. Segment-wide requirements for facilities, security, reliability, maintainability, and availability (RMA), design and construction, verification and validation, and external interfaces are also included in this section.
GSFPS-1154			4.2 Physical Deployment and Remote Operability
GSFPS-2719			The GOES-R GS functionality will be installed and operated at three sites. The NOAA Satellite Operations Facility (NSOF) in Suitland, MD and the Wallops Command and Data Acquisition Station (WCDAS) at Wallops, VA, are facilities that host current GOES systems. Together they will serve as the GOES-R primary facilities for operations. The third site will be a geographically-diverse Remote Backup Facility (RBU), located at Fairmont, WV (TBR), which will host a subset of the GS functionality and enable continuity of operations.
GSFPS-1158			4.2.1 Primary Facilities
GSFPS-1160	All	Base	GS functionalities described in this GS F&PS, with exception of the RBU and connecting networks shall be deployed at the WCDAS and NSOF facilities ("the GS primary facilities").
GSFPS-3146	All	Base	The GS at NSOF shall include the primary Mission Management (MM), Enterprise Management (EM), and selected Product Generation (PG) and Product Distribution (PD) functions.
GSFPS-3147	All	Base	The GS at WCDAS shall include the primary space communications services, EM and MM functions, and selected PG and PD functions.
GSFPS-1162	All	Base	The GS shall include all functionalities necessary for the production, RF uplink, and reception of GRB at the WCDAS facility.
GSFPS-1164	All	Base	The GS shall include all functionalities necessary for the reception of GRB at the NSOF facility.
GSFPS-1166	All (CCR-01290)	Base	The GS functionality resident at NSOF shall be operable from NSOF.
GSFPS-2946	All (CCR-01290)	Base	The GS functionality resident at WCDAS shall be operable from WCDAS.
GSFPS-1170	All (CCR-01290)	Base	The GS shall provide the capability to operate all WCDAS-deployed functionalities remotely from the NSOF.
GSFPS-2604	All	Base	The GS shall meet functional and performance specifications for two GOES-R satellites simultaneously except as noted in the element descriptions.
GSFPS-1172			4.2.2 Remote Backup Facility
GSFPS-1174	All	Base	The GS RBU functionality shall be deployed at Fairmont, WV (TBR).
GSFPS-1176	GS Ktr	Base	The GS RBU functionality shall be remotely operable from the NSOF.

Check the VSDE at <https://vsde.nasa.gov/vsde/portal> to verify correct version prior to use.

ID	Dev. Org.	Option	Requirement
GSFPS-2431	GS Ktr	Base	The GS RBU functionality shall be remotely operable from the WCDAS.
GSFPS-1178	GS Ktr	Base	The GS RBU functionality shall be operable from the GS RBU.
GSFPS-2605	GS Ktr	Base	The GS RBU shall operate without on-site staff, except in the case of continuity of operations deployments.
GSFPS-1186	GS Ktr	Base	The GS RBU shall provide all PG functions necessary to produce KPPs identified in Appendix A.
GSFPS-1188	All	Base	The GS shall include all functionalities necessary for the production, RF uplink, and reception of GRB at the RBU.
GSFPS-1190	GS Ktr	Base	The GS RBU shall provide all PD functions necessary to distribute KPPs to AWIPS as specified in the GOES-R Series Ground Segment (GS) to Advanced Weather Interactive Processing System (AWIPS) Interface Requirements Document (IRD) (P417-R-IRD-0160). (CCR-01366)
GSFPS-3103	All	Base	<p>The GS shall be capable of supporting the following single functions or combination of functions at the RBU:</p> <ul style="list-style-type: none"> a) Space - Ground Communications b) Command Generation and Telemetry Data Processing c) Raw (instrument) Data Processing to Level 0 d) Mission Operations to include real-time console operations, offline engineering and trending, bus and instrument health and safety monitoring, anomaly detection and resolution and procedure development e) Signal Monitoring f) Mission Scheduling and Planning g) Orbit Determination and Maneuver Planning h) Image Navigation and Registration Monitoring i) Routine Instrument Calibration Support and Product Monitoring j) Production of Level 1b Products and GLM k) Generation of KPPs l) GRB Assembly and Rebroadcast m) Sectorized Product Distribution to AWIPS n) Archiving (e.g., telemetry, EM events) o) 5-day temporary revolving storage p) Distribution of data to CLASS q) EMWIN/LRIT uplink r) Enterprise Management
GSFPS-1192			4.3 Ground Segment Maintainability
GSFPS-1204	All	Base	The GS design shall enable hardware and software maintenance of the GS while maintaining compliance with the functional and performance requirements of the GOES-R Series System.
GSFPS-1206	All	Base	The GS shall include diagnostic tools to support maintenance of all internal GS interfaces.
GSFPS-1208	All	Base	The GS shall include diagnostic tools to support maintenance of all external GS interfaces.
GSFPS-2432	All	Base	All elements of the GS shall make all locally collected performance and status measurements available to EM.

ID	Dev. Org.	Option	Requirement
GSFPS-2433	All	Base	All elements of the GS shall make all locally detected hardware and software anomaly reports available to EM.
GSFPS-2434	All	Base	All elements of the GS shall make resource operational status and performance data available to EM, including; resource utilization (processing, storage, network and communications status), processing throughput, equipment configuration and availability, data accounting, data processing status, and product status, to support operations, trending, and performance analyses.
GSFPS-3001	GS Ktr	Base	The GS shall have the capability to export any operator designated file to removable media (e.g., thumb drive, compact disk, tape, etc.).
GSFPS-3002	GS Ktr	Base	The GS shall have the capability to store any operator designated file to removable media (e.g., thumb drive, compact disk, tape, etc.).
GSFPS-1374	GS Ktr	Base	The GS shall permit an operator to install or upgrade software from any site within the GS.
GSFPS-3003	GS Ktr	Base	The GS shall enable access and inspection of software at any site, from any other site.
GSFPS-3004	GS Ktr	Base	The GS shall enable modification of software at any site from any other site.
GSFPS-3005	GS Ktr	Base	The GS shall enable testing of software at any site from any other site.
GSFPS-3006	GS Ktr	Base	The GS shall enable distribution of software at any site, from any other site.
GSFPS-3133	All (CCR-01290)	Base	The GS shall provide information and diagnostic tools, to include an online knowledge base, to isolate faults internal to the GS.
GSFPS-1210			4.4 Ground Segment Availability
GSFPS-1212			Operational availability is the fraction of time that the GOES-R Ground Segment (or a specified functionality contained within) is fully functional over a discrete 30-day period. This includes the GOES-R facilities, antennas, and networks out to the extent of the demarcations as defined in the IRDs. Maximum time to restore service (MaxTTRS) requirements are considered to be met at the 99.9 percentile (e.g., if an outage occurs, there is a 0.999 probability that service will be restored within the specified interval).
GSFPS-1214	All	Base	The GS shall operate continuously for the life of the GOES-R System.
GSFPS-1216	All	Base	The GS shall have a minimum Operational Availability of 0.989 over the GOES-R System lifetime, except for functionality for which a higher Operational Availability has been specified.
GSFPS-2910	All	Base	The GS shall have a MaxTTRS of 120 minutes for functions other than those for which a shorter MaxTTRS has been specified.
GSFPS-2606	OSD		The GS shall have a minimum Operational Availability of 0.99988 for the set of antenna subsystem functions, averaged over a 30-day period.
GSFPS-2908	OSD		The GS shall have a MaxTTRS of 5 minutes for antenna functionality.
GSFPS-1220	GS Ktr	Base	The GS shall have a minimum Operational Availability of 0.99988 for mission management functionality, averaged over a 30-day period.

Check the VSDE at <https://vsde.nasa.gov/vsde/portal> to verify correct version prior to use.

ID	Dev. Org.	Option	Requirement
GSFPS-2907	GS Ktr	Base	The GS shall have a MaxTTRS of 5 minutes for mission management functionality.
GSFPS-3007	GS Ktr	Base	The GS shall have a minimum Operational Availability of 0.99988 for functionality associated with the generation and GRB distribution of products, averaged over a 30-day period.
GSFPS-3008	GS Ktr	Base	The GS shall have a MaxTTRS of 5 minutes for functionality associated with the generation and GRB distribution of products.
GSFPS-1222	GS Ktr	Base	The GS shall have a minimum Operational Availability of 0.99861 for functionality associated with the generation of sectorized cloud and moisture imagery products, averaged over a 30-day period.
GSFPS-1224	GS Ktr	Base	The GS shall have a minimum Operational Availability of 0.99861 for functionality associated with the delivery of sectorized cloud and moisture imagery products, as specified in the GS to AWIPS IRD, to the AWIPS demarcation point, averaged over a 30-day period.
GSFPS-2909	GS Ktr	Base	The GS shall have a MaxTTRS of 60 minutes for functionality associated with sectorized cloud and moisture imagery products data collection, processing, and distribution to the AWIPS demarcation point.
GSFPS-2827	All	Base	The GS shall have a minimum availability of 0.99 for components associated with the generation of non KPP Level 2+ products, averaged over a 30 day period.
GSFPS-2905	All	Base	The GS shall have a minimum Operational Availability of 0.99, averaged over a 30-day period, for those functions associated with the distribution of End Products to the GOES-R Access Point.
GSFPS-3009	All	Base	The GS shall have no single point of failure at any site in mission management functionality.
GSFPS-2435	All	Base	The GS shall have no single point of failure at any site in L0, L1b, GLM, GRB, and sectorized cloud and moisture imagery product generation and distribution functionality.
GSFPS-2913	All	Base	The GS shall fail in a manner such that a failure in any function of the GS does not impact the ability of redundant, back-up, or contingency instances of the functionality to perform the function.
GSFPS-2911	All	Base	The GS shall isolate anomalies by function and by site.
GSFPS-1230	GS Ktr	Base	The GS shall initiate transmission of failover configuration messages for a given function to a functionality's backup site upon detection of a loss of that functionality at the primary site.

ID	Dev. Org.	Option	Requirement
GSFPS-3104	GS Ktr	Base	The GS shall be capable of issuing directives for failover to the RBU of any single function or combination of functions including the following: <ul style="list-style-type: none"> a) Space - Ground Communications b) Command Generation and Telemetry Data Processing c) Raw (instrument) Data Processing to Level 0 d) Real-time Mission Operations console operations e) Production of Level 1b Products and GLM Product f) Generation of KPPs g) GRB Assembly and Rebroadcast h) Sectorized Product Distribution to AWIPS i) Archiving (e.g., telemetry, EM events) j) 5-day temporary revolving storage
GSFPS-3010	GS Ktr	Base	The GS shall complete failover to the RBU of any function supported by the RBU within 5 minutes of failover initiation unless failover sequence is intentionally halted.
GSFPS-2947	All	Base	The GS RBU shall be capable of transitioning to operational status within 5 minutes.
GSFPS-3011	All	Base	The GS facilities shall maintain synchronization with each other such that historical data is not required to transition to operational status.
GSFPS-3012	GS Ktr	Base	The GS RBU shall transition to backup status for a given function once the primary responsibility for that function has returned to the primary facility or upon intentional termination of a failover sequence.
GSFPS-1232	GS Ktr	Base	The GS RBU shall retain primary responsibility for a function during handover back to the primary facility until successful handover has been completed.
GSFPS-1180	All	Base	The GS RBU shall be capable of operating independently of functionalities deployed at WCDAS and NSOF during failover events, while still meeting all applicable functional and performance requirements.
GSFPS-2603	All	Base	The GS shall be able to failover functionality between sites on a function-by-function basis, while maintaining continuity of operations.
GSFPS-1239			4.5 Latency and Refresh
GSFPS-1241			GS product latency and refresh requirements as applied from ingest from the OSD antenna IF switch to ingest of the GOES-R Access Subsystem and other external interfaces as defined in the appropriate IRDs, which vary by product, are located in Appendix A of this GS F&PS.
GSFPS-2437			GOES-R Access Subsystem-allocated Ground Latency requirements, which vary by product, are located in Appendix B of this GS F&PS. (CCR01291)
GSFPS-2948		0001	GS product latency and refresh requirements as applied from the OSD antenna IF switch to the ingest of the GOES-R Access Subsystem and other external interfaces as defined in the appropriate IRDs, which vary by product, are located in Appendix D of this GS F&PS.
GSFPS-3131			GS Antenna-allocated Latency requirements, which vary by product, are located in Appendix C of this GS F&PS. (CCR01291)

ID	Dev. Org.	Option	Requirement
GSFPS-3148			GS product latency and refresh requirements, as applied from the OSD antenna IF switch to the AWIPS demarcation point, are located in Appendix E of this GS F&PS.
GSFPS-3198	All	Base	The GS shall produce all End-Products in accordance with the definitions in Appendix A as applied through Appendices A-E. (CCR01292)
GSFPS-2786	GS Ktr	Base	The GS shall capture, process, and store a minimum of 99.9% of all theoretically available observable data downlinked from each GOES-R satellite when the system is operationally available, averaged over a 30-day period.
GSFPS-1238	GS Ktr	Base	The GS shall deliver to the GOES-R Access Subsystem ingest point a minimum of 99.9% of all observed data downlinked by each GOES-R satellite to the GOES-R Ground Segment consistent with the latency and refresh requirements in Appendix A of this GS F&PS when the system is operationally available, averaged over a 30-day period.
GSFPS-3098	GS Ktr	Base	The GS shall produce, at a minimum, a monthly average of 99.9% of the sectorized cloud and moisture imagery products from CONUS imagery, Full Disk imagery, and Mesoscale imagery within the latency and refresh times specified in Appendix E of this GS F&PS when the system is operationally available, averaged over a 30-day period.
GSFPS-2949	GS Ktr	0001	The GS shall deliver to the GOES-R Access Subsystem ingest point a minimum of 99.9% of all observed data downlinked by each GOES-R satellite to the GOES-R Ground Segment consistent with the latency and refresh requirements in Appendix D of this GS F&PS when the system is operationally available, averaged over a 30-day period.
GSFPS-2439	OSD		The GS GOES-R Access Subsystem shall meet the GOES-R Access Subsystem-allocated Ground Latency requirements in Appendix B a minimum of 99.9% of the time when the system is operationally available, averaged over a 30-day period. (CCR01291)
GSFPS-1245			4.6 Verification and Validation
GSFPS-1252	All	Base	The GS shall accommodate testing of both nominal operations and failure scenarios, including automated responses to out-of-limit conditions.
GSFPS-1254	All	Base	The GS shall include automated tests for validating and verifying GS functional capabilities and performance after repairs or modifications.
GSFPS-1256	All	Base	The GS shall permit an operator to monitor and control built-in tests.
GSFPS-1258	All	Base	The GS shall include monitoring test points and indicators to support function verification, performance analysis, and fault isolation.
GSFPS-1262	All	Base	The GS design shall prevent disruption to the operational system from activities such as upgrades, routine and preventive maintenance, internal integration and testing, and external interface testing.
GSFPS-1263			4.7 Segment-wide Requirements
GSFPS-2918	All	Base	The GS shall be designed to utilize the International System of Units (SI, metric measurement system), in concurrence with NPD 8010.2, Use of the SI (Metric) System of Measurement in NASA Programs.

ID	Dev. Org.	Option	Requirement
GSFPS-2445	All	Base	The GS shall comply with the DOC/NOAA/NESDIS enterprise and security architectures and associated reference models.
GSFPS-3105	All (CCR-01290)	Base	The GS shall have the capability to retrieve stored and on-line data, files, messages, and information.
GSFPS-1264			4.7.1 Security
GSFPS-1266	All	Base	The GS shall comply with all security requirements for a Major Application rated as High Impact as outlined in NIST-SP-800-53, the Department of Commerce IT Security Program Policy and Minimum Implementation Standards, and the NOAA IT Security Manual.
GSFPS-2440	All	Base	The GS shall have multi-layered security (Defense in Depth) and comply with the security recommendations for a Supervisory Control and Data Acquisition (SCADA) system found in NIST SP 800-82, Draft Guide to Industrial Control Systems (ICS) Security. (CCR01305)
GSFPS-2441	All	Base	The GS shall operate correctly as intended on systems using National Checklist Program Common Configurations such as the Federal Desktop Core Configuration.
GSFPS-3118	All	Base	GS systems shall implement common security configurations using the following order of precedence: <ul style="list-style-type: none"> a) NOAA b) DOC c) NIST d) Defense Information Systems Agency (DISA) e) Center for Internet Security (CIS) (CCR01304)
GSFPS-2442	All	Base	The GS shall allow system operation, maintenance, update and/or patching of software without altering configuration settings from the approved National Checklist Program Common Configurations such as the Federal Desktop Core Configuration.
GSFPS-2443	All	Base	The GS shall be designed to enforce the principle of “least privilege” so that authenticated users are limited to accessing only those system objects required for the normal performance of their duties. (CCR01305)
GSFPS-1491	GS Ktr	Base	The GS shall employ multi-factor identification and authentication that is separate from the administrative network, per NISTSP 800-82, Draft Guide to Industrial Control Systems (ICS) Security. (CCR01305)
GSFPS-3132	GS Ktr	Base	The GS shall employ smart card login in accordance with Homeland Security Presidential Directive 12 (HSPD-12). (CCR01305)
GSFPS-3200	All	Base	The GS shall include anti-malware and Host-based Intrusion Prevention System (HIPS) functions within the development, integration and test, and operations environments. (CCR1304)
GSFPS-1267			4.7.2 Telecommunications
GSFPS-1269	All	Base	The GS shall operate per IPv6 standards as given in RFC2460 - Internet Protocol, Version 6 (IPv6) Specification.
GSFPS-2611	OSO		The GS command and control circuits shall have a service level rating of Critical.

ID	Dev. Org.	Option	Requirement
GSFPS-2612	OSO		The GS data circuits shall have a service level rating of Routine.
GSFPS-2448	OSO		The GS circuits shall provide bandwidth to transport required products for all GOES-R series satellites.
GSFPS-2613	OSO		Each GS circuit procured shall satisfy the capacity, performance, and protocol specifications that are documented in the applicable interface control document (ICD).
GSFPS-3199	All	Base	The GS shall conduct all routine intra-element and inter-element communications via network connections. (CCR01341)
GSFPS-1271			4.7.3 Accessibility
GSFPS-1273	All	Base	The GS shall be accessible to individuals with disabilities as required by Section 508 of the Rehabilitation Act (29 USC 749d) as amended.
GSFPS-1274	All	Base	The GS shall meet or exceed the requirements given in 36 CFR Parts 1193, Telecommunications Act Accessibility Guidelines and 1194, Electronic and Information Technology Accessibility Standards.
GSFPS-2615	All	Base	The GS shall provide the capability for the operator to send to displays, printers, and files any of the following: spacecraft, instrument, or Ground Segment data and information used or generated by a GS function.
GSFPS-1278			4.7.4 Electromagnetic Interference
GSFPS-1280	All	Base	The GS shall comply with the electromagnetic interference (EMI) requirements of FCC rules CFR 47, Part 15, Subpart B, Sections 15.107 and 15.109 for Class A or B conducted and radiated emissions.
GSFPS-1282			4.7.5 Operational Integrity
GSFPS-1284	All	Base	The GS shall perform all functions, including those occurring simultaneously, with no interference with or performance degradation of any other GOES-R segment functionality.
GSFPS-1286	All	Base	The GS shall perform all functions, including those occurring simultaneously, with no interference with or performance degradation of any other functionality within the GS.
GSFPS-1288	All	Base	The GS shall perform all functions, including those occurring simultaneously, with no interference with or performance degradation of any other NOAA ground system.
GSFPS-1289			4.7.6 Time References
GSFPS-1291	GS Ktr	Base	The GS shall use the Coordinated Universal Time (UTC) reference for all time-of-day related data processing.
GSFPS-1293	GS Ktr	Base	The GS shall provide time and date annotation with a resolution of at least 10 microseconds.
GSFPS-3013	GS Ktr	Base	The GS shall synchronize all nodes at the primary facility utilizing the timing signal from the timing system resident at each respective primary facility location.
GSFPS-2449	GS Ktr	Base	The GS shall synchronize all nodes at the RBU utilizing the timing signal from the timing system resident at the RBU.

Check the VSDE at <https://vsde.nasa.gov/vsde/portal> to verify correct version prior to use.

ID	Dev. Org.	Option	Requirement
GSFPS-2450	GS Ktr	Base	No two nodes in the GS shall vary by more than 5 microseconds from the site master clock.
GSFPS-1294			4.7.7 Data Processing Error Rate
GSFPS-1296	All	Base	The GS shall process raw data through production with less than one error in 10E12 bits processed, averaged daily.
GSFPS-2616			4.7.8 Extensibility, Modularity, and Scalability
GSFPS-2617	All	Base	The GS shall be extensible to operate up to four (4) satellites simultaneously.
GSFPS-2618	All	Base	The GS shall be implemented such that all elements can be independently scalable by at least 300% to accommodate any future growth, including the exercise of contract options.
GSFPS-2622	All	Base	Individual GS computer processor CPU utilization shall not exceed 70%, averaged daily.
GSFPS-2623	All	Base	Individual GS computer processor memory utilization shall not exceed 50%, averaged daily.
GSFPS-2771	All	Base	The GS shall , with the baseline delivery as well as with deliveries associated with any exercised contract options, size all processing, storage and throughput for at least 50% reserve capacity of that necessary to meet performance requirements.
GSFPS-2625	All	Base	The GS shall use modular hardware (Line Replaceable Units) and software that allows changes and enhancements to be performed without interfering with GS operations.
GSFPS-2626	All	Base	GS hardware shall use functional modules that allow replacement to improve performance, reliability or for other reasons.
GSFPS-2764	All	Base	The GS shall be modular/plug-and-play such that it will accommodate individual algorithm changes, as well as the deletion of existing and the addition of new algorithms, without the need for recompilation of other software modules.
GSFPS-2792	All	Base	The GS shall be designed such that it is modular, extensible, extendable and open.
GSFPS-3014	All	Base	The GS shall provide the capability for increased automation of GS operations throughout the life of the program.
GSFPS-3092	All	Base	The GS development and Integration and Test (I&T) environments shall be independently and simultaneously fully functional from the IF Switch through the GS.
GSFPS-3093	All	Base	The GS elements shall each have independent and simultaneously fully functional Development and I&T environments from the element inputs through outputs, with the MM demarcation point at the IF Switch.
GSFPS-3121			4.7.9 Configuration Management System
GSFPS-3122	All	Base	The GS shall capture, manage, and update the baseline configuration of the GS hardware and software. (CCR01305)

ID	Dev. Org.	Option	Requirement
GSFPS-3123	GS Ktr	Base	The GS configuration management system shall include maintenance history accounting that enables tracking, and reporting at the component, subsystem, element and GS levels.
GSFPS-3124	GS Ktr	Base	The GS configuration management system shall enable sharing/linking anomaly reporting and status, software build, and history information such that configuration management system information may be queried and reported by information (data fields) contained in each of those functions.
GSFPS-3125	GS Ktr	Base	The GS configuration management system shall enable reporting and tracking of data by, at a minimum: <ul style="list-style-type: none"> a) Anomaly/Incident Report Identifier b) Hardware/Software CI Identifier c) Hardware component identifier d) Subsystem identifier e) Element identifier f) Software Build Identifier g) Software Version Number h) COTS identifier/nomenclature i) Operator j) Date range k) Problem type l) Verification event
GSFPS-3126	GS Ktr	Base	The GS configuration management system's anomaly tracking capability shall include, at a minimum, the capabilities of the existing anomaly tracking systems.
GSFPS-2819			4.8 Development Environment
GSFPS-2828	GS Ktr	Base	The GS shall provide a development environment for GS software development and checkout for all GS elements.
GSFPS-2829	GS Ktr	Base	The GS development environment shall support L1b Calibration and Validation (Cal/Val), L1b algorithm maintenance, and L2+ algorithm/parameter maintenance as well as the software development for all GS elements.
GSFPS-2830	GS Ktr	Base	The GS development environment shall be capable of hosting the GS operational baseline software.
GSFPS-2309	GS Ktr	Base	The GS development environment shall be sized such that the simultaneous execution of all elements of the GS software baseline will meet operational performance requirements.
GSFPS-2914	GS Ktr	Base	The portion of the GS development environment at WCDAS shall provide access to all data necessary for the offline execution of any single process or set of processes (including implemented algorithms) nominally resident at WCDAS.
GSFPS-2831	GS Ktr	Base	The GS development environment shall provide the selectable capability to capture and store logs, configurations, performance data, and other artifacts associated with development activities.
GSFPS-2832	GS Ktr	Base	The GS development environment shall provide tools to enable the change, recompilation, and execution of any segment/module of the source code from any GS element.

ID	Dev. Org.	Option	Requirement
GSFPS-2833	GS Ktr	Base	The GS development environment shall provide the capability to develop, modify and checkout the integrated operation of all GS databases, tables and configuration files.
GSFPS-2834	GS Ktr	Base	The GS development environment shall utilize the same configuration management and version control tools as the operational environment.
GSFPS-2835	GS Ktr	Base	The portion of the GS development environment at NSOF shall have at least 25 TB of dedicated storage for use by the Government.
GSFPS-2836	GS Ktr	Base	The portion of the GS development environment at WCDAS shall have at least 2 TB of dedicated storage.
GSFPS-2837	GS Ktr	Base	The GS development environment shall include C/C++ and Fortran 90/95 compilers.
GSFPS-2838	GS Ktr	Base	The GS development environment shall include Java, and Perl and shell scripting languages.
GSFPS-2839	GS Ktr	Base	The GS development environment shall have the capability to export compiled code segments and associated configuration and other support files to the operational and integration and test (I&T) environments following established configuration management (CM) processes.
GSFPS-2840	GS Ktr	Base	The GS development environment shall be physically or logically segregated from other GS environments such that data and developed/compiled code can only be pulled from or pushed to other GS environments.
GSFPS-2842	GS Ktr	Base	The GS development environment shall provide tools to monitor and display GS software execution performance and compare relative to F&PS performance requirements.
GSFPS-2843	GS Ktr	Base	The GS development environment shall provide local workstation operator/developer access and control at WCDAS.
GSFPS-2844	GS Ktr	Base	The GS development environment shall provide local workstation operator/developer access and control at NSOF.
GSFPS-2311	GS Ktr	Base	The GS development environment shall provide the capability to modify, execute, and checkout algorithms individually or in groups, to support the verification and validation of product quality requirements and product generation performance.
GSFPS-2738	GS Ktr	Base	The GS development environment shall be physically or logically segregated from other GS environments such that instances of any portion of the GS software baseline executing on the development environment cannot interfere with nor degrade the performance of software executing on any other environment.
GSFPS-2317	GS Ktr	Base	The GS development environment shall provide the capability to capture, store, and export output of the offline execution of any single or set of algorithms.
GSFPS-3015	GS Ktr	Base	The GS development environment shall have the capability to replay Transfer Frames from the 5-day revolving temporary storage back as a separate virtual satellite flow.
GSFPS-2820	GS Ktr	Base	The GS development environment shall have access to engineering telemetry data as it becomes available to the GS.

ID	Dev. Org.	Option	Requirement
GSFPS-2821			4.8.1 Calibration/Validation / WCDAS Product Maintenance
GSFPS-2847	GS Ktr	Base	The portion of the GS development environment located at WCDAS shall have local access to L0 data as it becomes available to the GS at WCDAS.
GSFPS-2848	GS Ktr	Base	The portion of the GS development environment at WCDAS shall have local access to all input and output data and products as they are processed by the GS.
GSFPS-2849	GS Ktr	Base	The GS development environment shall be capable of producing products nominally generated at WCDAS from L0 data, using existing and modified implemented algorithms and calibration coefficients, via local operator/developer access at WCDAS.
GSFPS-2850	GS Ktr	Base	The portion of the GS development environment located at WCDAS shall be capable of ingesting and processing GOES-R compatible format L0 test data sets.
GSFPS-2851	GS Ktr	Base	The GS development environment shall have the Interactive Data Language (IDL) and image processing software (e.g. ENVI) installed.
GSFPS-2852	GS Ktr	Base	The portion of the GS development environment located at WCDAS shall have the capability to make and checkout changes to the calibration coefficients.
GSFPS-2853	GS Ktr	Base	The GS development environment shall provide the capability to make updated calibration coefficient databases available to the operational and I&T environments following established CM procedures.
GSFPS-2854	GS Ktr	Base	The portion of the GS development environment at WCDAS shall make products produced on the development environment available for analysis and local storage.
GSFPS-2855	GS Ktr	Base	The GS development environment shall provide a removable media capability at each site.
GSFPS-2856	GS Ktr	Base	The GS development environment shall provide for security-compliant thin-client (virtual machine) access to the development environment from external algorithm maintenance or Cal/Val facilities. (Note: Thin client is defined to mean that no local software applications are transferred to or run on the remote client machine).
GSFPS-2313	GS Ktr	Base	The GS development environment shall provide access to all data necessary for the offline execution of any single L2+ algorithm or set of algorithms.
GSFPS-2915	GS Ktr	Base	The GS development environment shall host tools, provided by the Government to support algorithm maintenance and calibration /validation activities.
GSFPS-3102	GS Ktr	Base	The portion of the GS development environment at WCDAS shall be capable of ingesting and processing GOES-R compatible format L1b test data sets for those L2+ end-products nominally resident at WCDAS.
GSFPS-2822			4.8.2 Level 2+ Algorithm Maintenance
GSFPS-2857	GS Ktr	Base	The portion of the GS development environment located at NSOF shall provide local access to L1b and L2+ data and products from the GRB as they become available to the GS at NSOF. (CCR01286)

ID	Dev. Org.	Option	Requirement
GSFPS-2858	GS Ktr	Base	The portion of the GS development environment located at NSOF shall provide access to operational L2+ products as they are produced.
GSFPS-2859	GS Ktr	Base	The portion of the GS development environment located at NSOF shall provide local access to ancillary data as it becomes available to the GS at NSOF.
GSFPS-2860	GS Ktr	Base	The portion of the GS development environment located at NSOF shall be capable of producing L2+ products using modified L2+ algorithms, modified algorithm parameters and alternate ancillary data.
GSFPS-2861	GS Ktr	Base	The portion of the GS development environment located at NSOF shall be capable of ingesting and processing GOES-R compatible format L1b test data sets.
GSFPS-2862	GS Ktr	Base	The portion of the GS development environment located at NSOF shall make L2+ products produced on the development environment available for developer analysis and local storage in the development environment.
GSFPS-2863	GS Ktr	Base	The portion of the GS development environment located at NSOF shall have the capability to make and checkout changes to run-time configurable algorithm parameters on the development environment.
GSFPS-2864	GS Ktr	Base	The GS development environment shall provide the capability to export updated run-time configurable algorithm parameters to the operational and I&T environments following established CM procedures.
GSFPS-2823			4.9 Integration and Test Environment
GSFPS-2865	GS Ktr	Base	The GS shall provide an environment to support software I&T for all GS elements.
GSFPS-2866	GS Ktr	Base	The GS I&T environment shall be capable of processing all GOES-R data.
GSFPS-3154	GS Ktr	Base	The GS I&T environment shall have access to engineering telemetry data as it becomes available to the GS.
GSFPS-2867	GS Ktr	Base	The GS I&T environment shall provide operator access and control.
GSFPS-2868	GS Ktr	Base	The GS I&T environment shall be sized such that the execution of all elements of the GS software baseline simultaneously will meet operational performance requirements.
GSFPS-2869	GS Ktr	Base	The GS I&T environment shall be physically or logically segregated from other GS environments such that instances of any portion of the GS software baseline executing on the I&T environment cannot interfere with nor degrade the performance of software executing on any other environment.
GSFPS-3127	GS Ktr	Base	The GS I&T environment shall utilize the same software configuration management and version control tools as the operational environment.
GSFPS-2870	GS Ktr	Base	The GS I&T environment shall provide tools to monitor and display software execution performance and compare relative to GS-F&PS performance requirements.
GSFPS-2871	GS Ktr	Base	The GS I&T environment shall be capable of exporting product generation output data to the development environment.

Check the VSDE at <https://vsde.nasa.gov/vsde/portal> to verify correct version prior to use.

ID	Dev. Org.	Option	Requirement
GSFPS-2872	GS Ktr	Base	The GS I&T environment shall be capable of the operational implementation of GS software, including databases and algorithms, following established configuration management processes, and without disruption of mission operations.
GSFPS-2319	GS Ktr	Base	The GS I&T environment shall have the capability to capture and store cumulative offline product generation output from 36 hours of continuous processing.
GSFPS-1246	GS Ktr	Base	The GS I&T environment shall accommodate independent element and subsystem tests, end-to-end tests, integration and verification activities, certification and accreditation security tests, without interfering with ongoing operations.
GSFPS-1248	GS Ktr	Base	The GS I&T environment shall provide the selectable capability to capture and store logs, configurations, performance data, and other artifacts associated with test activities.
GSFPS-1250	GS Ktr	Base	The GS I&T environment shall accommodate test and verification of planned modifications under operational-equivalent conditions.
GSFPS-1260	GS Ktr	Base	The GS I&T environment shall accommodate input and output of test data via removable physical media.
GSFPS-2994			4.10 Operator Human-Machine Interface
GSFPS-3016	GS Ktr	Base	The GS shall provide a capability for information entry and editing.
GSFPS-3017	GS Ktr	Base	The GS shall display any single page simultaneously and independently at any number of viewing locations, as designated by the operator.
GSFPS-3018	GS Ktr	Base	The GS shall provide the capability to create, customize, and maintain display page and graph definitions.
GSFPS-3019	GS Ktr	Base	The GS shall provide for the definition of abbreviated keyboard entries for executing operator directives.
GSFPS-3020	GS Ktr	Base	The GS shall display up to ten (10) parameters on a single graph.
GSFPS-3021	GS Ktr	Base	The GS shall have consistent operator human-machine interfaces for functions within the GS.
GSFPS-3022	GS Ktr	Base	The GS shall provide access to available functions through a human-machine interface, allowing the operator to access tools and information and to perform actions.
GSFPS-3023	GS Ktr	Base	The GS shall have consistent visual and audible alarms for segment, elements, and subsystems.
GSFPS-3024	GS Ktr	Base	The GS shall generate event messages for all GS and satellite events.
GSFPS-1332	GS Ktr	Base	The GS shall allow the operator to configure the format and contents of displays.
GSFPS-1334	GS Ktr	Base	The GS shall display information in text and graphical formats.
GSFPS-1344	GS Ktr	Base	The GS shall acknowledge operator inputs within 0.5 seconds.
GSFPS-1346	GS Ktr	Base	The GS shall update displays of rapidly changing information at a maximum of twice per second.

Check the VSDE at <https://vsde.nasa.gov/vsde/portal> to verify correct version prior to use.

ID	Dev. Org.	Option	Requirement
GSFPS-1362	GS Ktr	Base	The GS shall permit an operator to enable and disable individual EM reporting status and alarms.
GSFPS-1444	GS Ktr	Base	The GS shall produce formatted hardcopy of displays, files, logs, and query responses upon operator request.
GSFPS-1448	GS Ktr	Base	The GS shall display notification of all non-nominal conditions to the GS operators.
GSFPS-3114	GS Ktr	Base	The GS shall retain critical events on the display until acknowledged by the operator.
GSFPS-1452	GS Ktr	Base	The GS shall generate notification messages indicating at least three (3) levels of severity, based on authorized operator-configurable conditions and criteria.
GSFPS-2634	GS Ktr	Base	The GS shall permit the display of a minimum of 20 active windows, including text and graphics displays, on a single operator session.
GSFPS-1654	GS Ktr	Base	The GS shall provide for the tabular and graphical display of data according to default and operator-specified display characteristics.
GSFPS-1299			5 ENTERPRISE MANAGEMENT REQUIREMENTS
GSFPS-1301			5.1 Overview
GSFPS-1303			Section 5 specifies the requirements associated with the Enterprise Management (EM) functional element - those requirements pertaining to oversight and supervision of the whole GS.
GSFPS-1305			In the EM context, supervision is defined as the ability to monitor, report, and provide capability for an operator response to anomalous conditions. GS operators at all sites will have access to the EM functionality for insight to their local site and to the distributed GS components, infrastructure, and interfaces. As the EM functionality receives status and other information provided by the distributed GS functions, operators will be able to monitor, trend, and perform other supervisory activities. While direct control of various systems will be implemented within the individual elements, the EM function provides operators with necessary insight to manage the end-to-end GS.
GSFPS-1308			5.2 General Enterprise Management
GSFPS-2451	GS Ktr	Base	The GS shall collect a heartbeat status for all components (hardware and software) in the GS.
GSFPS-2452	GS Ktr	Base	The GS shall provide complete reports of data associated with all detected anomalies for all GS components (hardware and software) determined to be critical to the performance of the GS.
GSFPS-1310	GS Ktr	Base	The GS EM functions shall be interoperable with GOES-R elements located at facilities hosting GS functions.
GSFPS-1312	GS Ktr	Base	The GS shall provide EM functions to GS operators located at any facility hosting GS functions.
GSFPS-1314	GS Ktr	Base	The GS shall permit operators at each facility hosting GS functions to access EM functions for GS elements at that facility, independent of the connectivity status of the other facilities hosting GS functions.

ID	Dev. Org.	Option	Requirement
GSFPS-2627	GS Ktr	Base	The GS shall capture event messages of EM events.
GSFPS-2628	GS Ktr	Base	The GS shall store event messages of all GS and satellite events for the life of the mission.
GSFPS-3106	GS Ktr	Base	The GS shall provide the capability for immediate element operator access to an operator-configurable subset of element-level events for a period of 90 days.
GSFPS-2629	GS Ktr	Base	The GS shall selectively filter EM event messages for forwarding to EM based on operator definition.
GSFPS-2630	GS Ktr	Base	The GS shall forward filtered event messages of EM events to the EM.
GSFPS-1360	GS Ktr	Base	The GS shall permit an operator to manually override any EM automated control process or operational constraint.
GSFPS-1316			5.2.1 Enterprise Management Data Management
GSFPS-1318	GS Ktr	Base	The GS shall display EM data to GS operators located at any facility hosting GS functions.
GSFPS-1320	GS Ktr	Base	The GS shall provide for an operator retrieval of stored and online EM data.
GSFPS-1324	GS Ktr	Base	The GS shall export at operator request, selected EM data, EM logs, and software on removable physical media.
GSFPS-1326	GS Ktr	Base	The GS shall retrieve, display, export, store for the life of the mission, and print operator-selected EM logs, EM reports, and EM data associated with all GS and satellite events.
GSFPS-1336	GS Ktr	Base	The GS shall monitor and display the GOES-R Access Point interface status.
GSFPS-1338	GS Ktr	Base	The GS shall display any EM-generated report via the operator HMI.
GSFPS-1340	GS Ktr	Base	The GS shall generate reports of operator-selected EM data for an operator-selected time-span.
GSFPS-3107	GS Ktr	Base	The GS shall have the capability to retrieve, display, trend, export (reports), store for the life of the mission, and print (reports) of performance measurements.
GSFPS-2731	GS Ktr	Base	The GS shall require operator action to recover from manual interventions.
GSFPS-1342			5.2.2 Enterprise Management Performance
GSFPS-1348	GS Ktr	Base	The GS shall provide operator notification of any monitored non-nominal condition within three seconds (3-seconds) of detection of the condition.
GSFPS-1350	GS Ktr	Base	The GS shall retrieve and display within 10 seconds operator selected EM data and logs created within the last 90 days.
GSFPS-1352			5.3 Enterprise Supervision
GSFPS-1358	GS Ktr	Base	The GS shall concurrently supervise the GS functions located at all facilities hosting GS functions.

ID	Dev. Org.	Option	Requirement
GSFPS-1364	GS Ktr	Base	The GS shall validate operator ground directive requests against allowable configurations.
GSFPS-1366	GS Ktr	Base	The GS shall permit an operator to configure GS network functions.
GSFPS-1370	GS Ktr	Base	The GS shall permit an operator to change selected configurations for supervised hardware or software.
GSFPS-1372	GS Ktr	Base	The GS shall permit an operator to change selected EM configuration and control parameters.
GSFPS-1376	GS Ktr	Base	The GS shall maintain established access privileges for different categories of GS operators and users.
GSFPS-1378	GS Ktr	Base	The GS shall supervise access by operators at any GOES-R site.
GSFPS-1382	GS Ktr	Base	The GS shall monitor and display GS resource operational status and performance, including; resource utilization (processing, storage, network and communications status), processing throughput, equipment configuration and availability, data accounting, data processing status, and product status, to support operations, trending, and performance analyses. (CCR01286)
GSFPS-1384	GS Ktr	Base	The GS shall monitor and display the status and performance of processes, including the satellite communications links, MM, EM, PG, PD, antenna subsystems, and external interfaces.
GSFPS-1388	GS Ktr	Base	The GS shall provide for correlation of failures to identify and process events such as cascading failures.
GSFPS-1390	GS Ktr	Base	The GS shall monitor applications communications status between components of the GS, both between facilities and within each facility.
GSFPS-1392	GS Ktr	Base	The GS shall monitor network communications status between components of the GS, both between facilities and within each facility.
GSFPS-1394	GS Ktr	Base	The GS shall capture and store CPU resource usage performance measurements for 90 days.
GSFPS-1396	GS Ktr	Base	The GS shall capture and store CPU loading performance measurements for 90 days.
GSFPS-1398	GS Ktr	Base	The GS shall capture and store memory usage performance measurements for 90 days.
GSFPS-1400	GS Ktr	Base	The GS shall capture and store disk access performance measurements (read and write) on a process basis for 90 days.
GSFPS-1404	GS Ktr	Base	The GS shall capture and store network usage performance measurements on a physical link basis for 90 days.
GSFPS-1406	GS Ktr	Base	The GS shall capture and store disk usage performance measurements on a hardware LRU basis for 90 days.
GSFPS-1420	GS Ktr	Base	The GS shall collect and store reliability events for satellite and GS LRUs for the life of the mission.
GSFPS-1422	GS Ktr	Base	The GS shall collect and store reliability events by hardware LRU for the life of the mission.
GSFPS-2950	GS Ktr	Base	The GS shall collect and store reliability events by software configuration item (CI) and version identifier for the life of the mission.

ID	Dev. Org.	Option	Requirement
GSFPS-1424	GS Ktr	Base	The GS shall record planned outages for maintenance and upgrades as events.
GSFPS-1426	GS Ktr	Base	The GS shall collect and store reliability event duration for each reliability event for the life of the mission.
GSFPS-1428	GS Ktr	Base	The GS shall differentiate anomalies by severity level.
GSFPS-1430	GS Ktr	Base	The GS shall capture and store logs of network events, configuration changes, and status information for the life of the mission.
GSFPS-1432	GS Ktr	Base	The GS shall capture and store logs of events, configuration changes, and status information for the life of the mission.
GSFPS-1438	GS Ktr	Base	The GS shall report GS performance against the latency and refresh criteria established in Appendix A, B, C, D, and E of the GS-F&PS.
GSFPS-1440	GS Ktr	Base	The GS shall provide the capability to perform short- and long-term trend analysis of system, network, and communications performance.
GSFPS-1442	GS Ktr	Base	The GS shall provide the capability to perform analysis of the resource impact of system, network, and communications modifications, enhancements, and reallocations.
GSFPS-1450	GS Ktr	Base	The GS shall page designated personnel of non-nominal conditions and alerts (e.g., satellite, instrument, and GS conditions, alerts, and alarms) based on operator defined recipients.
GSFPS-1454	GS Ktr	Base	The GS shall annotate and display notification messages with time and date of generation.
GSFPS-1456	GS Ktr	Base	The GS shall store notification messages in a way that enables retrieval by operator-selectable attributes, including type, time, and text string, anomalous component identification.
GSFPS-1458	GS Ktr	Base	The GS shall maintain visual notifications until the non-nominal condition is cleared.
GSFPS-3108	GS Ktr	Base	The GS shall store notification messages for a period of 90 days.
GSFPS-1462	GS Ktr	Base	The GS shall capture and store fault isolation information at the GS system and subsystem level, for both hardware and software CIs, for a period of 90 days.
GSFPS-1464	GS Ktr	Base	The GS shall autonomously evaluate all supervised elements to identify anomalous conditions.
GSFPS-1466	GS Ktr	Base	The GS shall autonomously initiate diagnostics to aid in isolating internal faults, using safeguards to prevent diagnostic operations from affecting other operations.
GSFPS-1468	GS Ktr	Base	The GS shall send fault recovery directives to GS systems and subsystems.
GSFPS-1470	GS Ktr	Base	The GS shall provide information to isolate faults between GS systems and external interfaces.
GSFPS-2824	GS Ktr	Base	The GS shall supervise integration and test environment functions.
GSFPS-2845	GS Ktr	Base	The GS shall supervise development environment functions.

ID	Dev. Org.	Option	Requirement
GSFPS-1471			5.4 Common Support Services
GSFPS-1489	OSD		The GS shall make user account information accessible to GS operations personnel for queries and EM report generation.
GSFPS-1495			5.5 Ground Segment Infrastructure
GSFPS-1496			5.5.1 External Interface Supervision
GSFPS-1498	GS Ktr	Base	The GS shall supervise GS interfaces to external elements, up to the GOES-R demarcation as defined in the GS IRDs.
GSFPS-1500	GS Ktr	Base	The GS shall supervise applications communications status between external elements and the GS.
GSFPS-1502	GS Ktr	Base	The GS shall supervise network communications status between external elements and the GS.
GSFPS-1503			5.5.2 Ground Segment Security Monitoring
GSFPS-1505	GS Ktr	Base	The GS shall manage operational networks consistent with all security and access control requirements.
GSFPS-1509	GS Ktr	Base	The GS shall alert operations personnel of security incidents.
GSFPS-1511	GS Ktr	Base	The GS shall correlate data from GS specific host-based and network-based intrusion prevention and detection system and firewalls.
GSFPS-1514			6 MISSION MANAGEMENT REQUIREMENTS
GSFPS-1516			6.1 Overview
GSFPS-1518			Section 6 specifies the Mission Management (MM) function of the GOES-R GS. MM comprises the hardware, software, and mission operations support functions required to safely and reliably control and communicate with the satellite, monitor satellite systems performance, and capture all raw instrument data necessary for production of mission data.

ID	Dev. Org.	Option	Requirement
GSFPS-1520			6.2 Operational View
GSFPS-1522			<p>MM encompasses all operational functions of the spacecraft and instruments as follows:</p> <ul style="list-style-type: none"> a) Mission operations to include: console operations, offline engineering and trending, bus and instrument engineering telemetry and performance monitoring, anomaly detection and resolution, procedure development, spacecraft resource accounting, special operation. b) Spacecraft telemetry data storage for the life of the mission and remote access to telemetry. c) Mission planning and scheduling. d) Spacecraft navigation (orbit and attitude determination and maneuver planning). e) Space-Ground communications. f) Antennas. g) Uplink services and monitoring. h) Downlink services and monitoring. i) Raw instrument data pre-processing and temporary storage. j) Level 0 (L0) processing. k) Image Navigation and Registration (INR) operations. l) Routine instrument calibration and L1b product monitoring. m) Flight Software (FSW) management. n) Flight operations simulation.
GSFPS-1548			6.3 General Mission Management
GSFPS-1550	GS Ktr	Base	The GS shall manage the GOES-R Satellite Series throughout the life of the mission.
GSFPS-2454	GS Ktr	Base	The GS shall maintain the Satellite Command and Telemetry Databases for the life of the mission.
GSFPS-1552	GS Ktr	Base	The GS shall perform satellite instrument calibration.
GSFPS-1554	GS Ktr	Base	The GS shall perform mission planning and scheduling.
GSFPS-2455	GS Ktr	Base	The GS shall collect performance measurements on MM including telemetry (TLM) limits, event messages, command (CMD) configurations, RF/IF signal quality, continuity and status.
GSFPS-2456	GS Ktr	Base	The GS shall report on MM performance measurements.
GSFPS-2631	GS Ktr	Base	The GS shall accommodate a minimum of 100 concurrent MM operator sessions, each capable of performing real-time commanding and telemetry monitoring, spacecraft operations, scheduling, and off-line telemetry analysis functions.
GSFPS-2632	GS Ktr	Base	The GS MM software shall be capable of supporting a minimum of four separate GOES-R Series satellites.
GSFPS-2633	GS Ktr	Base	The GS shall provide a configuration monitoring function to monitor the status and send configuration directives to all MM components and subsystems.
GSFPS-3026	GS Ktr	Base	The GS shall display a new page, complete with data within 3 seconds of its selection by the operator.

ID	Dev. Org.	Option	Requirement
GSFPS-3027	GS Ktr	Base	The GS shall perform reassignment of a workstation configuration from one spacecraft to another within 30 seconds of an operator directive.
GSFPS-3028	GS Ktr	Base	The GS shall provide continuity of Mission Management workstation displays and processing before/after an operator log-off/log-on for the purpose of gap free change of operators.
GSFPS-1558	GS Ktr	Base	The GS shall display MM data on an operator-selectable periodic basis.
GSFPS-1560	GS Ktr	Base	The GS shall capture logs of all operator inputs.
GSFPS-2458	GS Ktr	Base	The GS shall store and have the capability to retrieve, display, and generate and export reports of all operator inputs for 90 days.
GSFPS-3087	GS Ktr	Base	The GS shall provide the capability for operators to access the GS Satellite Telemetry and Command Databases from all GS locations.
GSFPS-3088	GS Ktr	Base	The GS shall manage the configuration of the contents of the Satellite Telemetry and Command Databases.
GSFPS-3089	GS Ktr	Base	The GS shall provide an XTCE-compliant ingest/export function/interface for the Satellite Telemetry and Command Databases.
GSFPS-3090	GS Ktr	Base	The GS shall provide a validation function for the Satellite Telemetry and Command Databases.
GSFPS-3091	GS Ktr	Base	The GS shall perform line-by-line syntax checking and display of all commands and ground directives.
GSFPS-3095	GS Ktr	Base	The GS shall configuration control all mission products (e.g., schedules, spacecraft commands, command loads, and flight software) stored and created within the GS.
GSFPS-3096	GS Ktr	Base	The GS shall import, process, and store command procedures developed externally using the GS scripting language logic statements and command blocks derived from the Satellite Telemetry and Command Database.
GSFPS-3138	GS Ktr	Base	The GS shall manage the GOES-R Mission Operations Database (MODB).
GSFPS-3139	GS Ktr	Base	The GS shall provide the capability for operators to access the GOES-R MODB from all GS locations.
GSFPS-3157	GS Ktr	Base	The GS MODB shall be capable of being shared by all parties (operations and satellite/instrument teams) to maintain all satellite mission operations products.
GSFPS-3140	GS Ktr	Base	The GS shall provide a validation function for the GOES-R MODB.
GSFPS-3141	GS Ktr	Base	The GS shall provide an XTCE-compliant ingest/export function/interface for the GOES-R MODB.
GSFPS-3142	GS Ktr	Base	The MODB shall be delivered as a delimited ASCII file.
GSFPS-3158	GS Ktr	Base	The GS MODB shall conform to the GOES-R Flight Project Telemetry and Command Database Style Guidelines for command and telemetry mnemonic designations contained in the MODB.

ID	Dev. Org.	Option	Requirement
GSFPS-3143	GS Ktr	Base	The MODB delivery shall include either a database schema defining tables and entries or an XML schema and tag definitions, as appropriate.
GSFPS-3159			The GS MODB will contain mission operations data items which may include: Commands, Telemetry, Packets, Conversions, Command APID Description, Database Version Name, Subsystem List, Real-Time Procedures, Instrument Tables, Instrument Symbols Of Interest, Instrument Action Codes, Instrument Onboard Scripts, Equations, Ground Data Points, Displays, Workspaces, Display Templates, Auto-Generated Displays, User, Workstation Permissions, Group Permissions, Spacecraft Onboard Processor Definitions, Spacecraft Memory Load Templates, EGSE Commands, EGSE Telemetry, EGSE Conversions, EGSE Auto-Gen Displays, EGSE Display Header Template, EGSE Test Sets, EGSE Subsystem List, Area Phase List.
GSFPS-1562			6.4 Satellite Engineering Telemetry Monitoring
GSFPS-1564	GS Ktr	Base	The GS shall monitor and display satellite engineering telemetry data.
GSFPS-1566	GS Ktr	Base	The GS shall make engineering telemetry available for real time display, analysis, limit checking, and storage for the life of the mission.
GSFPS-1572	GS Ktr	Base	The GS shall maintain telemetry limit sets for application to engineering telemetry parameters.
GSFPS-1574	GS Ktr	Base	The GS shall identify all out of limit conditions detected in satellite engineering telemetry.
GSFPS-1576	GS Ktr	Base	The GS shall generate event messages to communicate the status of the satellite and elements of the MM.
GSFPS-1578	GS Ktr	Base	The GS shall display an emulation of the onboard command execution process for absolute time sequence (ATS) and relative time sequence (RTS) command loads.
GSFPS-1580			6.5 Event Logs
GSFPS-2459	GS Ktr	Base	The GS shall capture event messages of satellite and mission management events.
GSFPS-2460	GS Ktr	Base	The GS shall selectively filter MM event messages based on operator designation for forwarding to EM.
GSFPS-2461	GS Ktr	Base	The GS shall forward filtered event messages of satellite and mission management events to EM.
GSFPS-1584	GS Ktr	Base	The GS shall display satellite originated event messages.
GSFPS-1586	GS Ktr	Base	The GS shall generate an event history report on operator request.
GSFPS-1588	GS Ktr	Base	The GS shall selectively filter event messages for display, based on operator input.
GSFPS-1590	GS Ktr	Base	The GS shall maintain a database of operator-defined event types.

ID	Dev. Org.	Option	Requirement
GSFPS-1592			6.6 Remote Access to Mission Management Data
GSFPS-1594	GS Ktr	Base	The GS shall permit an operator to retrieve and display spacecraft and instrument engineering telemetry through a secure interface from remote locations.
GSFPS-1596	GS Ktr	Base	The GS remote access function shall be configurable to provide other operational data that may not necessarily occur in the satellite engineering telemetry stream such as event and status messages and INR performance data.
GSFPS-1598	GS Ktr	Base	The GS remote access function shall retrieve historical satellite telemetry from the GS mission-life storage.
GSFPS-1600	GS Ktr	Base	The GS remote access function shall retrieve and display satellite telemetry as received by the MM element with no more than 5 second latency.
GSFPS-1602	GS Ktr	Base	The GS shall forward engineering telemetry to a secure operator access point for purposes of remote access.
GSFPS-2768	GS Ktr	Base	The GS shall use secure one-way links for spacecraft telemetry and command systems when connecting to public networks or to networks which have connections to public networks.
GSFPS-1604			6.7 Anomaly Response
GSFPS-2635	GS Ktr	Base	The GS shall enable the operator to specify criteria for anomalies.
GSFPS-2737	GS Ktr	Base	The GS shall enable the operator to create contingency procedures.
GSFPS-1606	GS Ktr	Base	The GS shall manage contingency operations procedures.
GSFPS-1608	GS Ktr	Base	The GS shall execute contingency operations procedures.
GSFPS-1610	GS Ktr	Base	The GS shall correlate detected anomalies with an applicable contingency procedure for the operator to activate.
GSFPS-2951	GS Ktr	Base	The GS shall store contingency operations procedures for the life of the mission.
GSFPS-1612	GS Ktr	Base	The GS shall enable the reporting of anomaly investigation results.
GSFPS-1614	GS Ktr	Base	The GS shall store anomaly investigation results for the life of the mission.
GSFPS-1616			6.8 Ground Directives
GSFPS-1618	GS Ktr	Base	The GS shall produce ground directives that control elements within the GS.
GSFPS-1620	GS Ktr	Base	The GS shall create and store ground directives for inter-site control of GS elements.
GSFPS-1622	GS Ktr	Base	The GS shall execute ground directives.
GSFPS-1624	GS Ktr	Base	The GS shall graphically display ground directive execution.
GSFPS-1626	GS Ktr	Base	The GS shall display ground directives in text.

ID	Dev. Org.	Option	Requirement
GSFPS-1628	GS Ktr	Base	The GS shall display ground directives synchronized with satellite commands.
GSFPS-1630	GS Ktr	Base	The GS shall capture and store logs of ground directives and execution for the life of the mission.
GSFPS-1632	GS Ktr	Base	The GS shall include ground directives and responses in the satellite event log as directed by the operator.
GSFPS-3029	GS Ktr	Base	The GS shall display to the operator a list of available telemetry paths for each satellite.
GSFPS-3030	GS Ktr	Base	The GS shall allow operator designation of the telemetry path for the source of telemetry for each satellite configuration.
GSFPS-3031	GS Ktr	Base	The GS shall display to the operator a list of available command paths to each satellite.
GSFPS-3032	GS Ktr	Base	The GS shall allow operator designation of the command path for each satellite configuration.
GSFPS-1634			6.9 Engineering Telemetry
GSFPS-1636	GS Ktr	Base	The GS shall receive engineering telemetry at the MM operations console within 0.5 seconds of ground receipt.
GSFPS-1638	GS Ktr	Base	The GS shall capture and store all logs generated by the processing of telemetry data for the life of the mission.
GSFPS-1640	GS Ktr	Base	The GS shall capture all out of limit telemetry conditions.
GSFPS-2465	GS Ktr	Base	The GS shall store logs of all out of limit telemetry conditions for the life of the mission.
GSFPS-2466	GS Ktr	Base	The GS shall have the capability to retrieve, display, export, store for the life of the mission, and print operator-selected spacecraft and instrument engineering telemetry, telemetry reports, and telemetry logs upon request of the operator.
GSFPS-1771	GS Ktr	Base	The GS shall process engineering telemetry as received (including normal mode and dwell mode telemetry).
GSFPS-2640	GS Ktr	Base	The GS shall have the capability to retrieve an echo of the full 4/32 kbps engineering data telemetry stream from the instrument raw data stream.
GSFPS-2641	GS Ktr	Base	The GS shall forward engineering telemetry parameters retrieved from the instrument raw data stream to the normal MM telemetry process for display, retrieval, and storage for the life of the mission.
GSFPS-1568	GS Ktr	Base	The GS shall convert all satellite engineering telemetry data to engineering units.
GSFPS-1652	GS Ktr	Base	The GS shall permit operator-selectable display of stored satellite engineering telemetry data in engineering units or raw counts.
GSFPS-1644			6.10 Engineering Analysis
GSFPS-1646	GS Ktr	Base	The GS shall report spacecraft and instrument performance and trends based on collected engineering telemetry.
GSFPS-1648	GS Ktr	Base	The GS shall generate spacecraft and instrument performance trend analyses using real-time and stored telemetry.

ID	Dev. Org.	Option	Requirement
GSFPS-1656	GS Ktr	Base	The GS shall have the ability to export data in a non-proprietary file format.
GSFPS-3033	GS Ktr	Base	The GS shall trend satellite life-limited resources (e.g., component ontime, battery charge/discharge cycles, propellant remaining) for the life of the mission.
GSFPS-1658			6.11 Flight Software Maintenance
GSFPS-2467	GS Ktr	Base	The GS shall manage access to spacecraft flight software.
GSFPS-1660	GS Ktr	Base	The GS shall maintain knowledge of the current state of onboard satellite (spacecraft and instrument) memory contents.
GSFPS-1662	GS Ktr	Base	The GS shall manage spacecraft flight software.
GSFPS-1664	GS Ktr	Base	The GS shall manage instrument flight software.
GSFPS-1666	GS Ktr	Base	The GS shall provide for operator-initiated memory dumps from satellite processors.
GSFPS-1668	GS Ktr	Base	The GS shall process memory dumps from satellite processors for the purpose of memory verification.
GSFPS-1670	GS Ktr	Base	The GS shall maintain a current copy of each flight software image.
GSFPS-1672	GS Ktr	Base	The GS shall maintain current copies of all satellite tables.
GSFPS-1674	GS Ktr	Base	The GS shall manage general satellite operations tables.
GSFPS-2636	GS Ktr	Base	The GS shall allow the operator to retrieve and utilize all stored copies of satellite flight software.
GSFPS-2923	GS Ktr	Base	The GS shall generate flight software loads for uplink to the satellite.
GSFPS-1676	GS Ktr	Base	The GS shall verify flight software and table loads.
GSFPS-1678	GS Ktr	Base	The GS shall import flight software patches from the Flight Software Development Environment (FSDE).
GSFPS-2770	GS Ktr	Base	The GS shall maintain synchronization of the spacecraft clock.
GSFPS-1680			6.12 Satellite Simulator Interface
GSFPS-1683			The Satellite Simulator will have an interface with the GS antenna subsystem at the IF switch.
GSFPS-2637	GS Ktr	Base	The GS shall provide an interface between the Satellite Simulator and the MM telemetry and command subsystem at the NSOF, WCDAS, and RBU sites.
GSFPS-1685	GS Ktr	Base	The GS shall interface with the satellite simulator via baseband data.
GSFPS-1687	GS Ktr	Base	The GS shall send data to the satellite simulator that simulates the Ground Segment communications to the Space Segment.
GSFPS-1689	GS Ktr	Base	The GS shall receive data from the satellite simulator that simulates the Space Segment to Ground Segment communications.

ID	Dev. Org.	Option	Requirement
GSFPS-2468	GS Ktr	Base	The GS shall interface with satellite simulators to support simulation of at least three spacecraft simultaneously.
GSFPS-2638	GS Ktr	Base	The GS interface to the Satellite Simulator shall conform to the Spacecraft Simulator Design Document (GS-01).
GSFPS-1691			6.13 Image Navigation and Registration
GSFPS-1693			The Government will provide algorithms from the GOES-R earth pointing instrument vendors to either resample to a geo-referenced fixed grid coordinate system, for Advanced Baseline Imager (ABI) and Geostationary Lightning Mapper (GLM), or to provide geo-referenced information for INR processing. The Government will provide algorithms from the instrument vendors for the non-earth pointing instruments to geometrically locate to other coordinate systems. The ABI L1b algorithms are described in GOES-R Space Segment CDRL 80-1.
GSFPS-1695	GS Ktr	Base	The GS shall receive, from the Government, geometric calibration databases developed by the instrument vendor.
GSFPS-1697	GS Ktr	Base	The GS shall maintain geometric calibration databases.
GSFPS-1699	GS Ktr	Base	The GS shall geo-locate Earth-referenced instrument observation data in geodetic latitude and longitude.
GSFPS-3034	GS Ktr	Base	The GS shall locate Solar-referenced instrument observation data in the applicable reference frame.
GSFPS-3035	GS Ktr	Base	The GS shall perform landmarking of L1b images for visible and ground-viewing IR optical channels.
GSFPS-3036	GS Ktr	Base	The GS shall perform landmarking using a landmark database containing landmark locations and associated feature boundary data specific to operator designated sub-satellite locations.
GSFPS-1701			6.13.1 Image Navigation and Registration Monitoring and Performance
GSFPS-1703	GS Ktr	Base	The GS shall monitor spacecraft instrument INR performance.
GSFPS-2471	GS Ktr	Base	The GS shall autonomously monitor spacecraft instrument INR performance using predetermined landmarks from the landmark database.
GSFPS-1705	GS Ktr	Base	The GS shall display graphical, textual, and event messages related to INR performance parameters.
GSFPS-1707	GS Ktr	Base	The GS shall determine corrections to INR parameters.
GSFPS-1709	GS Ktr	Base	The GS shall report INR performance.
GSFPS-1711	GS Ktr	Base	The GS shall store INR performance data and processing parameters.
GSFPS-2472	GS Ktr	Base	The GS shall trend INR performance data for an operator-defined interval.
GSFPS-2245	GS Ktr	Base	The GS shall monitor the performance of the GOES-R Series system with respect to the image radiometry, geometry and temporal registration.

Check the VSDE at <https://vsde.nasa.gov/vsde/portal> to verify correct version prior to use.

ID	Dev. Org.	Option	Requirement
GSFPS-3037	GS Ktr	Base	The GS shall be capable of extracting and storing pre-defined landmark regions of geo-referenced instrument detector sample data (i.e., prior to a function such as resampling).
GSFPS-3038	GS Ktr	Base	The GS shall perform landmark recognition and measurement, by operator request, from previously stored geo-referenced instrument detector sample data.
GSFPS-3134	GS Ktr	Base	The GS shall monitor the performance characteristics of ABI, GLM and SUVI Image Navigation and Registration consistent with the respective instrument Performance and Operational Requirements Documents (PORDs).
GSFPS-3135	GS Ktr	Base	The GS shall manage ABI, GLM and SUVI Image Navigation and Registration ground-computed parameters, orbital elements and associated data consistent with the performance requirements of the instruments as described in the respective PORDs.
GSFPS-3136	GS Ktr	Base	The GS shall monitor the performance of the GOES-R Series system with respect to the image radiometry, geometry and temporal registration at a level of accuracy, precision, quantity, and frequency necessary to validate the instrument performance as described in their respective PORDs.
GSFPS-1713			6.14 GRB Product Monitoring
GSFPS-1715	GS Ktr	Base	The GS shall display operator selectable data and imagery from the received GRB data.
GSFPS-1717	GS Ktr	Base	The GS shall assess and report the quality of instrument radiometric performance.
GSFPS-2755	GS Ktr	Base	The GS shall assess and report the quality of performance for all instruments.
GSFPS-2474	GS Ktr	Base	The GS shall display imagery from the received GRB data selectable by source and band.
GSFPS-1723	GS Ktr	Base	The GS shall assess and report the quality of the received GRB data.
GSFPS-2759	GS Ktr	Base	The GS shall be capable of monitoring any data item contained within the GRB data stream.
GSFPS-2473	GS Ktr	Base	The GS shall receive GRB data as relayed from the GOES R Series satellites.
GSFPS-1724			6.15 Command Operations
GSFPS-2475	GS Ktr	Base	The GS shall process commands by satellite ID.
GSFPS-2924	GS Ktr	Base	The GS shall generate commands for uplink to the satellite.
GSFPS-2476	GS Ktr	Base	The GS shall authorize only one command console to command any one GOES-R Series satellite at a time.
GSFPS-2477	GS Ktr	Base	The GS shall complete a switchover of any non-command mode operator position to command mode within one minute of operator initiation of the action to switch.
GSFPS-1730	GS Ktr	Base	The GS shall generate real time commands.

ID	Dev. Org.	Option	Requirement
GSFPS-1732	GS Ktr	Base	The GS shall generate Relative Time command Sequences (RTS) for use in command loads.
GSFPS-2478	GS Ktr	Base	The GS shall manage RTSs.
GSFPS-2479	GS Ktr	Base	The GS shall provide the capability edit and validate RTSs.
GSFPS-1734	GS Ktr	Base	The GS shall generate Absolute Time command Sequences (ATS) for use in command loads.
GSFPS-2480	GS Ktr	Base	The GS shall be able to maintain at least fifty ATSs for each satellite.
GSFPS-2481	GS Ktr	Base	The GS shall provide the capability for the operator to stop an ATS during execution.
GSFPS-2482	GS Ktr	Base	The GS shall provide tools for the development, modification, and deletion of ATSs.
GSFPS-2483	GS Ktr	Base	The GS shall be capable of nesting command procedures to at least six levels.
GSFPS-2732	GS Ktr	Base	The GS shall be capable of restricting command authority to selected workstations.
GSFPS-2733	GS Ktr	Base	The GS shall provide tools for verification and validation of ATSs.
GSFPS-3111	GS Ktr	Base	The GS shall store ATSs and RTSs for the life of the mission.
GSFPS-2734	GS Ktr	Base	The GS shall be capable of transmitting encrypted commands upon operator direction.
GSFPS-2484	GS Ktr	Base	The GS shall provide a function to expand nested procedures within a parent procedure so that all steps taken are shown in the order to be executed in print and display.
GSFPS-1736	GS Ktr	Base	The GS shall generate stored command loads with an execution time span consistent with the satellite capability.
GSFPS-1738	GS Ktr	Base	The GS shall maintain in a database a selected subset of commands defined as "critical" commands.
GSFPS-3155	GS Ktr	Base	The GS shall have the capability to exclude hazardous commands from being executed.
GSFPS-1740	GS Ktr	Base	The GS shall confirm operator acknowledgement prior to execution of all critical commands.
GSFPS-1742	GS Ktr	Base	The GS shall preclude inadvertent and unauthorized satellite commanding.
GSFPS-1744	GS Ktr	Base	The GS shall perform database-defined prerequisite state checking based on telemetry before transmitting a real-time command.
GSFPS-1746	GS Ktr	Base	The GS shall accommodate command generation functionality as defined in the GOES-R Spacecraft Functional and Performance Specification (P 417-R-PSPEC-0014) and Space Segment (SS) to Ground Located - Command, Control, and Communications Segment (GL-C3S) (P 417-R-IRD-0001) IRD.
GSFPS-1748	GS Ktr	Base	The GS shall be capable of transmitting unencrypted commands upon operator direction.

ID	Dev. Org.	Option	Requirement
GSFPS-1750	GS Ktr	Base	The GS shall utilize a National Security Agency (NSA) or NIST certified encryption device compatible with the onboard decryptor to send commands to the satellite.
GSFPS-3039	GS Ktr	Base	The GS shall be capable of updating (add, change, or delete) any single command in an active command schedule, including revalidation, in no more than 30 seconds.
GSFPS-3040	GS Ktr	Base	The GS shall retransmit commands that have failed to load up to a specified number of retries.
GSFPS-3041	GS Ktr	Base	The GS shall take specified action (e.g., sound alarm, issue warning message, halt schedule) after the specified number of command retries have been exhausted.
GSFPS-3042	GS Ktr	Base	The GS shall provide the capability to enter commands from a keyboard at the IF interface to the antenna system.
GSFPS-3043	GS Ktr	Base	The GS shall provide limited raw and formatted telemetry display at the IF interface to the antenna system.
GSFPS-3044	GS Ktr	Base	The GS shall maintain a database of the path delays to the antenna aperture of the Ground Stations utilized for commanding each satellite.
GSFPS-3045	GS Ktr	Base	The GS shall provide continuity of satellite commanding through change of command authority from one workstation/console to another.
GSFPS-1752			6.15.1 Command Verification
GSFPS-1754	GS Ktr	Base	The GS shall verify by default all commands prior to being uplinked to the satellite.
GSFPS-1756	GS Ktr	Base	The GS shall verify stored command and memory (table) loads.
GSFPS-1758	GS Ktr	Base	The GS shall verify that all software, stored command, and table loads transmitted to the satellite have been properly stored on board.
GSFPS-1760	GS Ktr	Base	The GS shall have the capability to compare and confirm all flight software, stored command and table loads transmitted to the satellite.
GSFPS-1762	GS Ktr	Base	The GS shall verify from telemetry, command acceptance or rejection status of each command transmitted to the satellite.
GSFPS-1764	GS Ktr	Base	The GS shall verify via available telemetry that a command transmitted to the satellite produces a change in state consistent with successful command execution.
GSFPS-1766	GS Ktr	Base	The GS shall allow command verification to be disabled or enabled on an individual command basis.
GSFPS-2485			6.15.2 Ground Command Management
GSFPS-2486	GS Ktr	Base	The GS shall provide command constraint checking consistent with the satellite telemetry and command database.
GSFPS-2487	GS Ktr	Base	The GS shall provide for a two-step commanding mode.
GSFPS-2488	GS Ktr	Base	The GS shall route all commands through the designated primary command path.

ID	Dev. Org.	Option	Requirement
GSFPS-2489	GS Ktr	Base	The GS shall enable the operator to select an Absolute Time Sequence schedule to be run on the ground or on board.
GSFPS-2490	GS Ktr	Base	The GS shall enable the operator to switch from one schedule to another.
GSFPS-2491	GS Ktr	Base	The GS shall enable the operator to modify a schedule on the ground, upload it, and switch to the modified schedule.
GSFPS-2736	GS Ktr	Base	The GS shall transmit real time commands within 1 second of definition by the operator.
GSFPS-1767			6.16 Telemetry
GSFPS-1773	GS Ktr	Base	The GS shall interpret the value and quality flag of a telemetry point.
GSFPS-1775	GS Ktr	Base	The GS shall enable the operator to define and maintain in a database mission-critical parameter telemetry items (safety monitors).
GSFPS-1777	GS Ktr	Base	The GS shall monitor operator-defined mission-critical parameter telemetry items (safety monitors).
GSFPS-1779	GS Ktr	Base	The GS shall display operator-defined mission-critical parameter telemetry items (safety monitors).
GSFPS-1781	GS Ktr	Base	The GS shall activate a distinct audible and visual alarm based on an operator-defined set of monitored mission-critical parameter telemetry items (safety monitors).
GSFPS-1783	GS Ktr	Base	The GS shall receive and process high-fidelity simulated telemetry.
GSFPS-1785	GS Ktr	Base	The GS shall perform context-dependent telemetry processing.
GSFPS-1787	GS Ktr	Base	The GS shall perform data flagging for all telemetry parameters (including pseudo telemetry) when there has been no receipt of such telemetry for a period of time equivalent to an operator-specified multiple of the telemetry point's update rate.
GSFPS-1789	GS Ktr	Base	The GS shall alarm telemetry values that violate predefined database values (limit sets) as received.
GSFPS-1791	GS Ktr	Base	The GS shall allow adjustments by operators with the correct privileges for any telemetry limit value defined in the telemetry database, including pseudo telemetry.
GSFPS-1793	GS Ktr	Base	The GS shall permit operator-initiated limit adjustments, without permanent change to the telemetry database.
GSFPS-1795	GS Ktr	Base	The GS shall allow limit adjustments to be made in either raw or engineering units.
GSFPS-1797	GS Ktr	Base	The GS shall allow an operator to display the name of the active limit set.
GSFPS-1799	GS Ktr	Base	The GS shall allow an operator to display the current limit values for any telemetry parameter.
GSFPS-1801	GS Ktr	Base	The GS shall allow the operator to disable and enable alarm messages.
GSFPS-1803	GS Ktr	Base	The GS shall indicate a change in state of bi-level telemetry parameters, as a feature of the limit set function.

ID	Dev. Org.	Option	Requirement
GSFPS-1963	OSD		The GS shall monitor spacecraft telemetry to assess performance of the UPS including level of transponder power output and transponder state (off or on).
GSFPS-2009	GS Ktr	Base	The GS shall refresh telemetry displays at a rate consistent with satellite telemetry refresh rates.
GSFPS-2642			6.16.1 Pseudo Telemetry
GSFPS-2643	GS Ktr	Base	The GS shall generate derived "pseudo telemetry" parameters based on combined or single engineering telemetry data parameters processed through user-defined algorithms (including algebraic, trigonometric, and logical operators).
GSFPS-2644	GS Ktr	Base	The GS shall process, display, and store for the life of the mission pseudo telemetry in the same manner as normal satellite telemetry.
GSFPS-2645	GS Ktr	Base	The GS shall time-tag pseudo telemetry relative to the last received packet of the source telemetry parameter used in the algorithm.
GSFPS-2646	GS Ktr	Base	The GS shall update pseudo telemetry parameters at a frequency equal to the lowest frequency source telemetry parameter used in the algorithm.
GSFPS-2647	GS Ktr	Base	The GS shall provide an interface for operators to define pseudo telemetry algorithms.
GSFPS-2648	GS Ktr	Base	The GS shall permit user-defined pseudo telemetry items to be saved and accessed for all real time telemetry processing.
GSFPS-2649	GS Ktr	Base	The GS shall permit the ad-hoc definition of pseudo telemetry algorithms by an operator ("on-the-fly") under a user session that will be processed until that session is closed.
GSFPS-2011	GS Ktr	Base	The GS shall have the capability to store at least 1000 pseudo-telemetry operator-defined algorithms as they are generated in real-time and near real-time processing.
GSFPS-2650	GS Ktr	Base	The GS shall permit ad-hoc defined pseudo telemetry algorithms to be saved.
GSFPS-3046			6.16.2 Satellite State Monitoring
GSFPS-3047	GS Ktr	Base	The GS shall maintain an image of the current onboard status of each discrete commandable telemetered parameter.
GSFPS-3048	GS Ktr	Base	The GS shall compare the status of discrete commandable telemetry with the ground image to determine if an uncommanded change in state has occurred.
GSFPS-3049	GS Ktr	Base	The GS shall flag and report any uncommanded change in discrete telemetry in comparison with the ground image.
GSFPS-3050	GS Ktr	Base	The GS discrete telemetry ground image compare capability shall be configurable by operator directive.
GSFPS-1805			6.17 Mission Planning and Scheduling
GSFPS-1807	GS Ktr	Base	The GS shall generate schedules of coordinated satellite operations, communications services, payload operations, and supporting functions for each in-flight satellite.

ID	Dev. Org.	Option	Requirement
GSFPS-1809	GS Ktr	Base	The GS shall provide mission operations data for planning and scheduling including mission configuration, maneuver planning, and satellite activity prioritization.
GSFPS-1811	GS Ktr	Base	The GS shall plan and schedule satellite resources for routine mission operations.
GSFPS-1813	GS Ktr	Base	The GS shall plan and schedule special operations such as station keeping maneuvers, east-west, north-south yaw flips, thruster flushing, engineering or science investigations outside normal operations.
GSFPS-1815	GS Ktr	Base	The GS shall plan and schedule routine and special instrument calibration activities.
GSFPS-1817	GS Ktr	Base	The GS shall plan and schedule significant events and satellite maintenance resources up to 12 months in advance.
GSFPS-1819	GS Ktr	Base	The GS shall create command loads, memory (table) loads and command sequences to operate the satellite.
GSFPS-1821	GS Ktr	Base	The GS shall create command loads with overlap periods, such that the currently executing command load can initiate the command load awaiting execution.
GSFPS-2495	GS Ktr	Base	The GS schedule generation function shall provide schedule templates to permit building schedules for ground and stored command use.
GSFPS-2496	GS Ktr	Base	The GS schedule generation function shall perform line-by-line syntax checking of command files for verification.
GSFPS-2497	GS Ktr	Base	The GS shall provide a schedule execution and monitoring function which provides schedule shadowing for visual monitoring of onboard schedule command execution.
GSFPS-2651	GS Ktr	Base	The GS shall maintain a minimum of 200 mission plans simultaneously.
GSFPS-2652	GS Ktr	Base	The GS shall validate schedules.
GSFPS-1823	GS Ktr	Base	The GS shall constraint check command loads.
GSFPS-1825	GS Ktr	Base	The GS shall deconflict satellite maintenance schedules with operations.
GSFPS-1827	GS Ktr	Base	The GS shall coordinate the storage of ATS and RTS command sequences on board the satellite.
GSFPS-1829	GS Ktr	Base	The GS shall provide coordination of control from one sequence to another on board the satellite.
GSFPS-1831	GS Ktr	Base	The GS shall execute the procedures and rules used to perform planning and scheduling of the satellite.
GSFPS-2760	GS Ktr	Base	The GS shall generate and forward command schedules and schedule updates to the backup subsystem and confirm all transfers at the sending and receiving ends.
GSFPS-3051	GS Ktr	Base	The GS shall provide schedule templates to allow building on-demand ABI scan command schedules based on those used for Mesoscale scans.

ID	Dev. Org.	Option	Requirement
GSFPS-3052	GS Ktr	Base	The GS shall generate an ABI scan command schedule containing only the latitude and longitude coordinates of the center point of the requested ABI scene and the execution time.
GSFPS-3053	GS Ktr	Base	The GS shall use existing ABI scene swath tables for upload to the satellite.
GSFPS-3054	GS Ktr	Base	The GS shall generate new ABI scene swaths tables for upload to the satellite.
GSFPS-3055	GS Ktr	Base	The GS shall perform constraint checks to ensure that all ABI scene scans follow predefined rules to meet instrument performance requirements.
GSFPS-1833			6.18 Space-Ground Functional Communications
GSFPS-1839	OSD		The GS shall monitor the command uplink for the GOES-R series.
GSFPS-1841	OSD		The GS shall monitor the Data Collection Platform Receive (DCPR) pilot uplink for the GOES-R series.
GSFPS-1843	OSD		The GS shall monitor the Data Collection Command (DCPC) uplink for the GOES-R series.
GSFPS-1845	OSD		The GS shall monitor the uplink for GRB for the GOES-R series.
GSFPS-2653	OSD		The GS shall monitor the uplink for EMWIN/LRIT for the GOES-R series.
GSFPS-1849	OSD		The GS shall monitor real-time telemetry for the GOES-R series.
GSFPS-1851	OSD		The GS shall monitor the DCPR downlink for the GOES-R series.
GSFPS-1853	OSD		The GS shall monitor the instrument raw data downlink for the GOES-R series.
GSFPS-2498	OSD		The GS shall make all monitored communication link information available to EM.
GSFPS-1855	GS Ktr	Base	The GS shall append a cyclical redundancy checking (CRC) integrity measure to instrument uploads consistent with the Space Segment (SS) to Ground Located - Command, Control, and Communications Segment (GL-C3S) (P 417-R-IRD-0001) IRD.
GSFPS-1857	GS Ktr	Base	The GS shall assess, maintain and report space-ground communications status, including data quality summary for all received data.
GSFPS-1859	GS Ktr	Base	The GS shall receive, process, and route all satellite data in real-time in accordance with Consultative Committee for Space Data System (CCSDS) data standards defined in the applicable documents.
GSFPS-2501	OSD		The GS shall communicate with the Space Segment consistent with the Space Segment (SS) to Ground Located - Command, Control, and Communications Segment (GL-C3S) (P 417-R-IRD-0001) IRD.
GSFPS-2657	GS Ktr	Base	The GS shall process all downlinks from a satellite concurrently.

ID	Dev. Org.	Option	Requirement
GSFPS-1863			6.19 Launch Segment Interface
GSFPS-1865	GS Ktr	Base	The GS shall receive launch data from the Launch Segment (LS), including: launch time, time of first contact, vectors, and ephemeris, as described in LS vendor documentation.
GSFPS-1867	GS Ktr	Base	The GS shall receive satellite data from the LS, while integrated at the launch site, as described in LS vendor documentation.
GSFPS-1869	GS Ktr	Base	The GS shall command the satellite through the LS interface.
GSFPS-1875	GS Ktr	Base	The GS shall send commands via the LS ground network.
GSFPS-1877	GS Ktr	Base	The GS shall receive telemetry via the LS ground network.
GSFPS-1879	GS Ktr	Base	The GS shall receive ranging from the LS ground network.
GSFPS-1881	GS Ktr	Base	The GS shall send orbital element or other acquisition data to the LS ground network.
GSFPS-1871			6.20 Space Segment Interface
GSFPS-2499	GS Ktr	Base	The GS shall receive engineering telemetry data from the satellite in the factory as described in the associated Flight Segment test plan and test procedure.
GSFPS-2500	GS Ktr	Base	The GS shall send satellite commands / command loads to the satellite in the factory as described in the associated Flight Segment test plan and test procedure.
GSFPS-1883			6.20.1 Emergency Managers Weather Information Network / Low Rate Information Transmission Interface
GSFPS-1885	OSD		The GS shall interface with the EMWIN/LRIT service in accordance with the Ground Segment (GS) to Emergency Managers Weather Information Network (EMWIN) / Low Rate Information Transmission (LRIT) Interface Requirements Document (IRD) (P 417-R-IRD-0095).
GSFPS-2659	OSD		The GS shall uplink EMWIN/LRIT signal as specified in the SS to EMWIN/LRIT IRD (P 417-R-IRD-0168).
GSFPS-1889			6.20.2 Data Collection System Interface
GSFPS-1891	OSD		The GS shall interface with DCS in accordance with the Ground Segment (GS) to Data Collection System (DCS) Interface Requirements Document (IRD) (P 417-R-IRD-0094).
GSFPS-2952	OSD		The GS shall uplink DCS data streams to the Satellite.
GSFPS-2670	OSD		The GS at the WCDAS shall receive test messages from the DAPS at the WCDAS site in accordance with the GS to DCS IRD (P-417-R-IRD-0094).
GSFPS-2671	OSD		The GS at the WCDAS shall transmit test messages, similar to Data Collection Platform Reports (DCPRs), in any DCPR channel to the Space Segment as specified in the DCPR's Certificate Standards in accordance with the DCS to SS IRD (417-R-IRD-0005).

ID	Dev. Org.	Option	Requirement
GSFPS-2672	OSD		The GS at the WCDAS shall receive test messages, similar to DCPRs, from the Space Segment in accordance with the SS to GS IRD (417-R-IRD-0005).
GSFPS-2673	OSD		The GS at the WCDAS site shall forward received test messages, similar to DCPRs, to the DAPS at the WCDAS site.
GSFPS-1904			6.21 Antenna
GSFPS-1905			The GS antenna subsystem(s), including the RF and IF interfacing equipment, will be provided as GFP to the contractor.
GSFPS-1906	GS Ktr	Base	The GS signal path connections (uplink and downlink) shall interface to the antenna subsystem at the Government-furnished IF switch.
GSFPS-1908	GS Ktr	Base	The GS shall interface to the antenna subsystem control component to send antenna control signals to the antenna subsystem.
GSFPS-1910	GS Ktr	Base	The GS shall interface to the antenna subsystem control component to receive antenna subsystem status data.
GSFPS-1912	GS Ktr	Base	The GS shall monitor and report antenna equipment status, event and alarm information.
GSFPS-2504	OSD		The GS shall make antenna equipment status, event and alarm information available to EM.
GSFPS-1914	OSD		The GS antennas shall self-check.
GSFPS-1916	OSD		The GS shall provide redundant L, S, and X - band downlink antenna paths.
GSFPS-1918	OSD		The GS antenna primary and redundant downlink paths shall be hot and available as the operational downlink.
GSFPS-1920	OSD		The GS antenna(s) shall provide redundant antenna satellite uplink paths.
GSFPS-1922	OSD		The GS antenna(s) operational path(s) shall be remotely selectable through GS control.
GSFPS-1924	OSD		The GS antennas shall program-track satellites.
GSFPS-2675	OSD		The GS antennas shall auto-track satellites.
GSFPS-1926	OSD		The GS shall monitor, report, and control antenna operational parameters.
GSFPS-2676	GS Ktr	Base	The GS shall remotely monitor, report, and control antenna operational parameters.
GSFPS-1928	OSD		The GS antenna subsystem shall perform ranging ground loop calibration while performing nominal operations.
GSFPS-2754	GS Ktr	Base	The GS shall be able to configure the tracking mode of the antenna.
GSFPS-3056	OSD		The GS antenna subsystems shall meet the Antenna-allocated Latency requirements of Appendix C 99.9% of the time that the system is operationally available, averaged over a 30-day period. (CCR01291)

ID	Dev. Org.	Option	Requirement
GSFPS-1930			6.22 Uplink Services
GSFPS-1932	OSD		The GS shall generate uplink stream for commanding.
GSFPS-1934	OSD		The GS shall generate uplink stream GRB format products in real-time for rebroadcast.
GSFPS-1936	OSD		The GS shall generate uplink stream for Unique Payload Services.
GSFPS-1937			6.22.1 Uplink Radio Frequency Monitoring
GSFPS-1938	OSD		The GS shall remotely monitor and display the individual RF/IF satellite uplink carriers immediately before the combining process.
GSFPS-1939	OSD		The GS shall remotely monitor and display the composite RF/IF satellite uplink signal after the final stage of amplification.
GSFPS-1940	OSD		The GS shall monitor all uplink paths simultaneously.
GSFPS-1944			6.22.2 Downlink Radio Frequency Monitoring
GSFPS-1945	OSD		The GS shall remotely monitor and display all RF/IF satellite downlinks.
GSFPS-1946	OSD		The GS shall remotely monitor downlinks from a point at the IF switch.
GSFPS-1949	OSD		The GS shall receive the GRB signal from the Space Segment as specified in the Space Segment (SS) to GOES Rebroadcast (GRB) Service Interface Requirements Document (IRD) (P 417-R-IRD-0002). (CCR01286)
GSFPS-1951	OSD		The GS shall monitor the GRB downlink performance for link quality including the received signal power and the bit error rate.
GSFPS-1956	OSD		The GS shall monitor the EMWIN/LRIT downlink performance for link quality including the received signal power and the bit error rate.
GSFPS-1968			6.23 Telemetry Downlink Receive
GSFPS-2505	GS Ktr	Base	The GS shall receive engineering telemetry from the satellite in the form of CCSDS Transfer Frames.
GSFPS-2506	GS Ktr	Base	The GS shall verify that received engineering telemetry Transfer Frames are uncorrupted.
GSFPS-2507	GS Ktr	Base	The GS shall flag engineering telemetry Transfer Frames determined to be corrupted.
GSFPS-2508	GS Ktr	Base	The GS shall pre-process engineering telemetry at a rate to keep pace with the receipt of Transfer Frames over the space to ground link.
GSFPS-2509	GS Ktr	Base	The GS shall record the quality and quantity of the engineering telemetry processed through the pre-processing function, including synchronization performance, CCSDS Transfer Frame processing status, and error correction performance.

ID	Dev. Org.	Option	Requirement
GSFPS-2510	GS Ktr	Base	The GS shall store for the life of the mission the quality and quantity of the engineering telemetry processed through the pre-processing function, including synchronization performance, CCSDS Transfer Frame processing status, and error correction performance in a daily preprocessing performance log file.
GSFPS-3109	GS Ktr	Base	The GS shall allow the operator to retrieve, display, export and print all stored performance logs.
GSFPS-2511	GS Ktr	Base	The GS shall monitor the ingest of the engineering telemetry data transfer frames to include the number of Transfer Frames received in a 5 minute period, number of fill packets, and number of Transfer Frames determined to be corrupted.
GSFPS-2512	GS Ktr	Base	The GS shall store all received CCSDS engineering telemetry Transfer Frames in a 5-day revolving temporary storage to support anomaly resolution.
GSFPS-2513	GS Ktr	Base	The GS shall make engineering telemetry pre-processing status information available to EM.
GSFPS-1970	GS Ktr	Base	The GS shall receive and pre-process telemetry from the satellite.
GSFPS-1972	GS Ktr	Base	The GS shall quality-check telemetry according to error detection decoding.
GSFPS-2514	GS Ktr	Base	The GS shall sort housekeeping data by application ID and by virtual channel.
GSFPS-1974	GS Ktr	Base	The GS shall flag telemetry errors.
GSFPS-3057			6.23.1 Telemetry Monitoring
GSFPS-3058	GS Ktr	Base	The GS shall implement a ground programmable telemetry monitoring function (TMON) compliant with GOES-R Spacecraft Functional and Performance Specification (P 417-R-PSPEC-0014).
GSFPS-3059	GS Ktr	Base	The GS shall apply corrective actions through the TMON function based on rules stored in the spacecraft flight computer's memory.
GSFPS-3060	GS Ktr	Base	The GS shall monitor and take action on at least 2048 telemetry points through the TMON function.
GSFPS-3061	GS Ktr	Base	The GS shall flag red limits through the TMON function based on action rules and red limits contained in a table residing in the flight computer's memory.
GSFPS-1976			6.24 Raw Instrument Data Pre-processing
GSFPS-1978	GS Ktr	Base	The GS shall receive raw instrument data from the satellite in the form of CCSDS Transfer Frames.
GSFPS-2521	GS Ktr	Base	The GS shall store all received CCSDS raw instrument data Transfer Frames in a 5-day revolving temporary storage to support anomaly resolution.
GSFPS-1980	GS Ktr	Base	The GS shall verify that received raw instrument data Transfer Frames are uncorrupted.
GSFPS-2515	GS Ktr	Base	The GS shall flag raw instrument data Transfer Frames determined to be corrupted.

ID	Dev. Org.	Option	Requirement
GSFPS-2516	GS Ktr	Base	The GS shall pre-process raw instrument data at a rate to keep pace with the receipt of Transfer Frames over the space to ground link consistent with the Space Segment (SS) to Ground Located - Command, Control, and Communications Segment (GL-C3S) (P 417-R-IRD-0001) IRD.
GSFPS-1982	GS Ktr	Base	The GS shall monitor, by virtual channel, the quality and quantity of raw instrument data processed through the pre-processing function.
GSFPS-2517	GS Ktr	Base	The GS shall capture the quality and quantity measures of the raw instrument data processed through the pre-processing function, including synchronization performance, CCSDS Transfer Frame processing status, and error correction performance.
GSFPS-2518	GS Ktr	Base	The GS shall store the quality and quantity measures of the raw instrument data processed through the pre-processing function, including synchronization performance, CCSDS Transfer Frame processing status, and error correction performance in a daily preprocessing performance log file.
GSFPS-1984	GS Ktr	Base	The GS shall monitor the status of the pre-processing function.
GSFPS-2522	GS Ktr	Base	The GS shall make instrument data pre-processing status information available to EM.
GSFPS-1988	GS Ktr	Base	The GS shall include mission operations data including spacecraft and instrument configuration, instrument observation data status, and ephemerides in preprocessing metadata.
GSFPS-3062	GS Ktr	Base	The GS shall store preprocessing metadata in the 5-day revolving temporary storage system.
GSFPS-1992			6.24.1 Ranging Services
GSFPS-1994	GS Ktr	Base	The GS shall perform ranging through an RF link to the satellite to an accuracy of 50ns.
GSFPS-2523	OSD		The GS shall implement the ranging functionality in accordance with the Space Segment (SS) to Ground Located - Command, Control, and Communications Segment (GL-C3S) IRD (417-R-IRD-0001).
GSFPS-1996	OSD		The GS shall transmit a ranging signal.
GSFPS-1998	OSD		The GS shall receive a ranging signal.
GSFPS-2000	GS Ktr	Base	The GS shall provide range measurements to the orbit determination function.
GSFPS-3063	GS Ktr	Base	The GS shall perform ranging through the GRB link.
GSFPS-3064	GS Ktr	Base	The GS shall perform ground loop calibration for each antenna system utilized for GRB ranging.
GSFPS-3065	GS Ktr	Base	The GS shall perform ground loop calibration for each antenna system for purposes of ORT&TC ranging.
GSFPS-2002			6.24.2 Space-Ground Communications Performance
GSFPS-2678	GS Ktr	Base	The GS shall process a minimum of eight physical command configurations for each satellite.

ID	Dev. Org.	Option	Requirement
GSFPS-2008	GS Ktr	Base	The GS shall process up to eight physical telemetry stream configurations for each satellite.
GSFPS-2013			6.25 Spacecraft Navigation
GSFPS-2017	GS Ktr	Base	The GS shall perform spacecraft attitude determination consistent with the error tolerances defined in the GIRD.
GSFPS-2019	GS Ktr	Base	The GS shall monitor spacecraft attitude determination and control data.
GSFPS-2021	GS Ktr	Base	The GS shall verify the performance of the spacecraft attitude control system and the accuracy of the onboard attitude estimate.
GSFPS-2023	GS Ktr	Base	The GS shall plan and execute satellite attitude maneuvers.
GSFPS-2025	GS Ktr	Base	The GS shall perform post-launch satellite sensor and actuator alignment determination.
GSFPS-2027	GS Ktr	Base	The GS shall perform determination of attitude sensor biases and sensor calibration parameters.
GSFPS-2029	GS Ktr	Base	The GS shall perform determination of attitude actuator performance parameters.
GSFPS-2031	GS Ktr	Base	The GS shall perform attitude control system calibration.
GSFPS-2033			6.26 Orbit Determination
GSFPS-2035	GS Ktr	Base	The GS shall acquire two-line orbital elements to support launch and orbit raising activities.
GSFPS-2037	GS Ktr	Base	The GS shall acquire and process measurement data for orbit determination, including raw range measurements, spacecraft instrument observations and engineering telemetry.
GSFPS-2039	GS Ktr	Base	The GS shall plan orbit station management activities and station relocation maneuvers.
GSFPS-2041	GS Ktr	Base	The GS shall plan and execute satellite orbit maintenance activities.
GSFPS-2043	GS Ktr	Base	The GS shall plan and execute orbit relocation activities to change the orbit of a satellite.
GSFPS-2045	GS Ktr	Base	The GS shall plan post-operational mission orbit raising disposal activities.
GSFPS-2047	GS Ktr	Base	The GS shall execute post-operational mission orbit raising disposal activities.
GSFPS-2049	GS Ktr	Base	The GS shall determine the orbit of each satellite during each mission phase from transfer orbit injection by the launch vehicle through verification of the final post-mission orbit-raising maneuver.
GSFPS-3066	GS Ktr	Base	The GS shall plan orbital maneuvers and maneuver sequences such that maneuver plans may be reviewed 12 months in advance.
GSFPS-3067	GS Ktr	Base	The GS shall model orbital maneuvers with an absolute accuracy of 5% deviation relative to the predicted and actual post-maneuver delta-V.
GSFPS-3068	GS Ktr	Base	The GS shall determine spacecraft orbit within 120 meters.

Check the VSDE at <https://vsde.nasa.gov/vsde/portal> to verify correct version prior to use.

ID	Dev. Org.	Option	Requirement
GSFPS-3069	GS Ktr	Base	The GS shall quantify the performance of the GS orbit determination estimate relative to the onboard orbit estimate.
GSFPS-3070	GS Ktr	Base	The GS shall perform spacecraft thruster calibration for the purpose of maneuver planning and propellant management.
GSFPS-2051			6.27 Level 0 Processing
GSFPS-2055	GS Ktr	Base	The GS shall ingest pre-processed instrument observation data.
GSFPS-2057	GS Ktr	Base	The GS shall process pre-processed instrument observation data by virtual channel.
GSFPS-2066	GS Ktr	Base	The GS shall create L0 data.
GSFPS-2070	GS Ktr	Base	The GS shall monitor and report effective data compression yields.
GSFPS-3110	GS Ktr	Base	The GS shall allow the operator to retrieve, display, and export reports of effective compression yields.
GSFPS-2525	GS Ktr	Base	The GS shall extract Instrument Calibration Data from the L0 data set (for 7-day storage and GS mission-life storage).
GSFPS-2080	GS Ktr	Base	The GS shall create L0 product metadata that includes an accounting of uncorrectable errors in the data.
GSFPS-2082	GS Ktr	Base	The GS shall make L0 product metadata available for downstream processing.
GSFPS-2090			6.28 Mission Management Storage
GSFPS-2094	GS Ktr	Base	The GS shall store each copy of the satellite flight software (spacecraft and instrument) for the life of the mission.
GSFPS-3112	GS Ktr	Base	The GS shall have the capability to retrieve, display, export, and store for the life of the mission operator-selected data from the 5-day revolving temporary storage.
GSFPS-2096	GS Ktr	Base	The GS shall have the capability to retrieve 5-day revolving temporary storage data by selected time periods.
GSFPS-2769	GS Ktr	Base	The GS shall be capable of replaying transfer frames from the 5-day revolving temporary storage back as a separate virtual satellite flow.
GSFPS-2098	GS Ktr	Base	The GS shall allow copying selected data from the 5-day revolving temporary storage to removable media.
GSFPS-2103	GS Ktr	Base	The GS shall capture and store Transfer Frames in the 5-day revolving temporary storage.
GSFPS-2826			6.28.1 Raw Data Recorder
GSFPS-2873	GS Ktr	Base	The GS shall provide a standalone recorder for site specific data capture of instrument and spacecraft data streams.
GSFPS-2874	GS Ktr	Base	The recorder shall accept the baseband data signal from the spacecraft and instruments.
GSFPS-2875	GS Ktr	Base	The recorder shall be able to simultaneously record individual satellite telemetry and instrument data streams.

ID	Dev. Org.	Option	Requirement
GSFPS-2876	GS Ktr	Base	The GS shall provide a standalone recorder for site specific data playback of instrument and spacecraft data streams.
GSFPS-2877	GS Ktr	Base	The input of the recorder shall be compliant with the applicable data stream ICD.
GSFPS-2878	GS Ktr	Base	The output of the recorder shall be compliant with the applicable data stream ICD.
GSFPS-2879	GS Ktr	Base	The recorder shall be portable/transportable.
GSFPS-2880	GS Ktr	Base	The recorder shall have removable commercial off-the-shelf media and drive units.
GSFPS-2881	GS Ktr	Base	The recorder media shall be compatible, interchangeable, and easily movable between multiple instances of the recorder.
GSFPS-2882	GS Ktr	Base	The recorder shall , at operator direction, export/replicate designated data sets on compatible media.
GSFPS-2883	GS Ktr	Base	The recorder shall capture all bits received, including data containing bit errors.
GSFPS-2884	GS Ktr	Base	The recorder shall playback all the bits received, replicating the stream and including reproducing data which includes bit errors.
GSFPS-2885	GS Ktr	Base	The recorder shall output at baseband.
GSFPS-2886	GS Ktr	Base	The recorder shall be configurable to record for an operator specified interval(s) totaling at least 72 hours over the period of a week.
GSFPS-2887	GS Ktr	Base	The recorder shall be configurable to playback for an operator specified interval(s) totaling at least 72 hours over the period of a week.
GSFPS-2888	GS Ktr	Base	The recorder shall record data for 72 continuous hours when so configured by the operator with no breaks in the captured data stream.
GSFPS-2889	GS Ktr	Base	The recorder shall playback data for 72 continuous hours when so configured by the operator with no breaks in the playback output.
GSFPS-2890	GS Ktr	Base	The recorder shall time-stamp the data as it is recorded to a one second resolution.
GSFPS-2891	GS Ktr	Base	During replay the recorder shall make available the timestamps of the data to a one second resolution.
GSFPS-2892	GS Ktr	Base	The recorder shall , at operator direction, synchronize its time clock to the GS reference source.
GSFPS-2893	GS Ktr	Base	The recorder shall have operator selectable "off-line" mode (e.g., for operator interactive activities of set-up and configuration, or for selection of a pre-defined set-up/configuration).
GSFPS-2894	GS Ktr	Base	The recorder shall accept operator configurable starting point (e.g., time of day, time of year) and data stream(s) for both recording and playback.
GSFPS-2895	GS Ktr	Base	The recorder shall save operator defined set-ups and configurations, as designated by the operator, for future use by the operator.

ID	Dev. Org.	Option	Requirement
GSFPS-2896	GS Ktr	Base	The recorder shall include a user interface, which can be used to fully control all record and playback operations from computers networked to the recorder.
GSFPS-2898	GS Ktr	Base	The recorder shall display its status to the operator, including real-time, record-time/playback-time, and configuration.
GSFPS-2899	GS Ktr	Base	The recorder shall uniquely identify each volume of media on which it records data.
GSFPS-2900	GS Ktr	Base	The recorder shall maintain a directory of the media identifier and the contents of each recorded volume of data.
GSFPS-2901	GS Ktr	Base	The recorder shall append the medium identifier and the directory of contents of each recorded volume of data, as part of the information on each item of media.
GSFPS-2902	GS Ktr	Base	The recorder shall read the medium identifier and the content directory of all media loaded on it.
GSFPS-2903	GS Ktr	Base	The recorder shall display the medium identifier and the directory of contents of media known to it.
GSFPS-2904	GS Ktr	Base	The recorder shall be configurable by the operator to accept external electronic triggers to start/stop recording.
GSFPS-2527			6.29 Calibration Scheduling
GSFPS-2528	GS Ktr	Base	The GS shall permit automated planning and scheduling of routine radiometric calibration activities for ABI, using defined ABI modes.
GSFPS-2529	GS Ktr	Base	The GS shall permit automated planning and scheduling of special radiometric calibration activities for ABI, using defined ABI modes.
GSFPS-2530	GS Ktr	Base	The GS shall permit automated planning and scheduling of ABI lunar and stellar observations to allow long-term calibration drift measurement and correction.
GSFPS-2531	GS Ktr	Base	The GS shall permit automated planning and scheduling of routine instrument calibration activities for GLM, using defined GLM modes.
GSFPS-2532	GS Ktr	Base	The GS shall permit automated planning and scheduling of routine radiometric calibration activities for Solar Ultraviolet Imager (SUVI), using defined SUVI modes.
GSFPS-2533	GS Ktr	Base	The GS shall permit automated planning and scheduling of long-term radiometric performance monitoring activities for SUVI, employing routine electronic calibration measurements, internal sources, and the sun, and using defined SUVI modes.
GSFPS-2534	GS Ktr	Base	The GS shall permit automated planning and scheduling of routine radiometric calibration activities for Extreme ultraviolet and X-ray Irradiance Sensor (EXIS), using defined EXIS modes.
GSFPS-2535	GS Ktr	Base	The GS shall permit automated planning and scheduling of long-term radiometric performance monitoring activities for EXIS, employing routine electronic calibration measurements, internal sources, and the sun, and using defined EXIS modes.
GSFPS-2536	GS Ktr	Base	The GS shall permit automated planning and scheduling of long-term performance trending for Space Environment In Situ Suite (SEISS), from routine electronic calibration using defined SEISS modes.

ID	Dev. Org.	Option	Requirement
GSFPS-2537	GS Ktr	Base	The GS shall permit automated planning and scheduling of long-term performance trending for SEISS using defined SEISS modes.
GSFPS-2106			7 PRODUCT GENERATION REQUIREMENTS
GSFPS-2538			7.1 Overview
GSFPS-2539			Section 7 specifies the Product Generation (PG) function of the GOES-R Series GS.
GSFPS-2108			7.2 Operational View
GSFPS-2110			The PG function includes the generation of L1b and L2+ products from each GOES-R Series operational satellite on a continuous basis, meeting the applicable product latency requirements. Using the L1b and some L2+ output, the PG function also will create the GRB data set for rebroadcast by the GOES-R satellites and the eGVAR data set for rebroadcast by the GOES-N/O/P Ground System.
GSFPS-2132			7.3 Product Generation
GSFPS-2136	GS Ktr	Base	The GS shall produce all End-Products identified in GS Product Sets 1 and 2 in accordance with Appendix A, Table 1 using the Government-supplied algorithms.
GSFPS-2953	GS Ktr	0001	The GS shall produce all End-Products identified in GS Product Sets 1 and 2 in accordance with Appendix D using the Government-supplied algorithms.
GSFPS-2540	GS Ktr	0002	The GS shall process all End-Product sets identified in GS Product Set 3 as listed in Appendix A, Table 3 using the Government-supplied algorithms.
GSFPS-2541	GS Ktr	0002	The GS shall produce all End-Product sets identified in GS Product Set 4 in accordance with Appendix A, Table 3 using the Government-supplied algorithms.
GSFPS-3149			The GS will produce products in NetCDF (currently version 4) and McIDAS for Atmosphere, Land, and Ocean Products, and NetCDF (currently version 4) and FITS for Space Products.
GSFPS-3156	AWG		The L2+ algorithms shall yield Atmospheric, Ocean, and Land End-Products listed in the associated product table, preserving the Geographic Coverage Areas of the data provided by the instruments, subject to the Product Qualifiers Table in Appendix A.
GSFPS-2152	AWG		The L2+ algorithms shall yield Atmospheric, Ocean, and Land End-Products meeting the following End-Product Performance Parameters as listed in the associated product table and subject to the Product Qualifiers Table in Appendix A: a) Product Vertical Resolution b) Product Horizontal Resolution at nadir c) Product Mapping Accuracy at nadir d) Product Measurement Range e) Product Measurement Accuracy f) Product Measurement Precision

ID	Dev. Org.	Option	Requirement
GSFPS-3100			<p>The Government will provide L1b algorithms that define the method of processing instrument sensor data used to generate Atmospheric, Ocean, and Land End-Products meeting the following End-Product Performance Parameters as listed in the associated product table and subject to the Product Qualifiers Table in Appendix A:</p> <ul style="list-style-type: none"> a) Geographic Coverage Area b) Product Vertical Resolution c) Product Horizontal Resolution at nadir d) Product Mapping Accuracy at nadir e) Product Measurement Range f) Product Measurement Accuracy g) Product Measurement Precision
GSFPS-3194			<p>The Government will provide algorithms that define the method of processing L1b data to generate L2+ Atmospheric, Ocean, and Land End-Products that meet the following End-Product Performance Parameters as listed in the associated product table, subject to the Product Qualifiers Table in Appendix A:</p> <ul style="list-style-type: none"> a) Geographic Coverage Area b) Product Vertical Resolution c) Product Horizontal Resolution at nadir d) Product Mapping Accuracy at nadir e) Product Measurement Range f) Product Measurement Accuracy g) Product Measurement Precision
GSFPS-3182			<p>The Government will provide L2+ algorithms that define the method of processing instrument sensor data used to generate Atmospheric, Ocean, and Land End-Products for Lightning Detection that meet the following End-Product Performance Parameters as listed in the associated product table and subject to the Product Qualifiers Table in Appendix A:</p> <ul style="list-style-type: none"> a) Geographic Coverage Area b) Product Vertical Resolution c) Product Horizontal Resolution at nadir d) Product Mapping Accuracy at nadir e) Product Measurement Range f) Product Measurement Accuracy g) Product Measurement Precision
GSFPS-2164			<p>The Government will provide L1b algorithms that define the method of processing instrument sensor data used to generate Space Weather End-Products meeting the following End-Product Performance Parameters as listed in the associated product table and subject to the Product Qualifiers Table in Appendix A:</p> <ul style="list-style-type: none"> a) Product Orthogonality / Coverage Areas b) Product Horizontal/Angular Resolution c) Product Pointing/Mapping Uncertainty d) Product Measurement Range e) Product Measurement Accuracy f) Product Measurement Precision

ID	Dev. Org.	Option	Requirement
GSFPS-2150	GS Ktr	Base	The GS shall generate the L1b Atmospheric, Ocean, and Land End-Products listed in the associated product table, using the government supplied algorithms, preserving the Geographic Coverage Areas of the data provided by the instrument, subject to the Product Qualifiers Table in Appendix A.
GSFPS-3171	GS Ktr	Base	The GS shall generate L1b Atmospheric, Ocean, and Land End-Products preserving the following End-Product Performance Parameters produced by the government-provided algorithm as listed in the associated product table and subject to the Product Qualifiers Table in Appendix A: a) Product Vertical Resolution b) Product Horizontal Resolution at nadir c) Product Mapping Accuracy at nadir d) Product Measurement Range e) Product Measurement Accuracy f) Product Measurement Precision
GSFPS-2776	GS Ktr	Base	The GS shall generate L1b Atmospheric, Ocean, and Land End-Products meeting the Product Refresh / Coverage Time for each non-diagnostic instrument mode using the government-supplied algorithms listed in Table 1 Appendix A, subject to the Product Qualifiers Table in Appendix A.
GSFPS-2777	GS Kt	0001	The GS shall generate L1b Atmospheric, Ocean, and Land End-Products meeting the Product Refresh / Coverage Time for each non-diagnostic instrument mode using the government-supplied algorithms listed in Appendix D, subject to the Product Qualifiers Table in Appendix A. (CCR01288)
GSFPS-3119	GS Ktr	0002	The GS shall generate L1b Atmospheric, Ocean, and Land End-Products meeting the Product Refresh / Coverage Time for each non-diagnostic instrument mode using the government-supplied algorithms listed in Table 3 Appendix A, subject to the Product Qualifiers Table in Appendix A.
GSFPS-3183	GS Ktr	Base	The GS shall generate L1b Atmospheric, Ocean, and Land End-Products meeting the Vendor Allocated Ground Latency (VAGL) for each non-diagnostic instrument mode using the government-supplied algorithms listed in Table 1 Appendix A, subject to the Product Qualifiers Table in Appendix A.
GSFPS-3184	GS Ktr	0001	The GS shall generate L1b Atmospheric, Ocean, and Land End-Products meeting the VAGL for each non-diagnostic instrument mode using the government-supplied algorithms listed in Table 1 Appendix D, subject to the Product Qualifiers Table in Appendix A.
GSFPS-3185	GS Ktr	0002	The GS shall generate L1b Atmospheric, Ocean, and Land End-Products meeting the VAGL for each non-diagnostic instrument mode using the government-supplied algorithms listed in Table 3 Appendix A, subject to the Product Qualifiers Table in Appendix A.
GSFPS-3169	GS Ktr	Base	The GS shall generate L1b Space Weather End-Products listed in the associated product table, preserving the Product Orthogonality/ Coverage of the data provided by the instrument, subject to the Product Qualifiers Table in Appendix A.

ID	Dev. Org.	Option	Requirement
GSFPS-3174	GS Ktr	Base	The GS shall generate L1b Space Weather End-Products preserving the following End-Product Performance Parameters produced by the government-provided algorithm as listed in the associated product table and subject to the Product Qualifiers Table in Appendix A: a) Product Horizontal/Angular Resolution b) Product Pointing/ Mapping Accuracy c) Product Pointing Knowledge / Mapping Uncertainty d) Product Measurement Range e) Product Measurement Accuracy f) Product Measurement Precision
GSFPS-3186	GS Ktr	Base	The GS shall generate L1b Space Weather End-Products meeting the Product Refresh / Coverage Time for each non-diagnostic instrument mode using the government-supplied algorithms listed in Table 1 Appendix A, subject to the Product Qualifiers Table in Appendix A.
GSFPS-3187	GS Ktr	Base	The GS shall generate L1b Space Weather End-Products meeting the VAGL for each non-diagnostic instrument mode using the government-supplied algorithms listed in Table 1 Appendix A, subject to the Product Qualifiers Table in Appendix A.
GSFPS-2721	GS Ktr	Base	The GS shall generate L2+ Atmospheric, Ocean, and Land End-Products preserving the following End-Product Performance Parameters produced by the government-provided algorithm as listed in the associated product table and subject to the Product Qualifiers Table in Appendix A: a) Geographic Coverage Areas b) Product Vertical Resolution c) Product Horizontal Resolution at nadir d) Product Mapping Accuracy at nadir e) Product Measurement Range f) Product Measurement Accuracy g) Product Measurement Precision
GSFPS-3188	GS Ktr	Base	The GS shall generate L2+ Atmospheric, Ocean, and Land End-Products meeting the Product Refresh / Coverage Time for each non-diagnostic instrument mode using the government-supplied algorithms listed in Table 1 Appendix A, subject to the Product Qualifiers Table in Appendix A.
GSFPS-3189	GS Ktr	0001	The GS shall generate L2+ Atmospheric, Ocean, and Land End-Products meeting the Product Refresh / Coverage Time for each non-diagnostic instrument mode using the government-supplied algorithms listed in Table 1 Appendix D, subject to the Product Qualifiers Table in Appendix A.
GSFPS-3190	GS Ktr	0002	The GS shall generate L2+ Atmospheric, Ocean, and Land End-Products meeting the Product Refresh / Coverage Time for each non-diagnostic instrument mode using the government-supplied algorithms listed in Table 3 Appendix A, subject to the Product Qualifiers Table in Appendix A.
GSFPS-3191	GS Ktr	Base	The GS shall generate L2+ Atmospheric, Ocean, and Land End-Products meeting the VAGL for each non-diagnostic instrument mode using the government-supplied algorithms listed in Table 1 Appendix A, subject to the Product Qualifiers Table in Appendix A.

ID	Dev. Org.	Option	Requirement
GSFPS-3192	GS Ktr	0001	The GS shall generate L2+ Atmospheric, Ocean, and Land End-Products meeting the VAGL for each non-diagnostic instrument mode using the government-supplied algorithms listed in Table 1 Appendix D, subject to the Product Qualifiers Table in Appendix A.
GSFPS-3193	GS Ktr	0002	The GS shall generate L2+ Atmospheric, Ocean, and Land End-Products meeting the VAGL for each non-diagnostic instrument mode using the government-supplied algorithms listed in Table 3 Appendix A, subject to the Product Qualifiers Table in Appendix A.
GSFPS-2758	GS Ktr	Base	The GS shall generate End-Products based on the Government-provided Algorithm Packages such that the comparison of GS test data outputs and AWG test data outputs yields reproducibility based on squared correlation coefficient (r-squared) between these two of at least 0.9995 with no more than 1% of the compared values having error greater than 0.15% from the AWG-provided value for the given data point.
GSFPS-3129	GS Ktr	Base	The GS shall refresh sectorized products in accordance with Appendix E.
GSFPS-2148	GS Ktr	Base	The GS shall monitor and report all end-product performance parameter compliance.
GSFPS-2542	GS Ktr	Base	The GS shall store end-product performance parameters for the life of the mission.
GSFPS-2543	GS Ktr	Base	The GS shall forward the end-product performance parameters report to EM.
GSFPS-1434	GS Ktr	Base	The GS shall collect and report to EM performance measures at a level of detail sufficient to assess the margin on a per-process and per-product basis for product latency and refresh.
GSFPS-2180	GS Ktr	Base	The GS shall monitor and report all end-product performance parameters listed in the Appendix A end-product Table.
GSFPS-2205			The KPPs consist of: cloud and moisture imagery: CONUS, Full Disk, and Mesoscale, and sectorized products. The performance and quality constraints for CONUS, Full Disk, and Mesoscale KPP end-products are defined in Appendices A through D. The GS performance requirements with respect to sectorized products are defined in Appendix E.
GSFPS-2215			7.4 Metadata Generation
GSFPS-3168			The GS Data Management Plan [G417-R-PLN-0131] provides guidelines for GOES-R metadata.
GSFPS-2217	GS Ktr	Base	The GS shall generate metadata describing completeness of input, identifying content outliers, and documenting the UTC time of completion of production for each L1b and L2+ data product.
GSFPS-2928	GS Ktr	Base	The GS shall generate metadata that provides sufficient information at all levels of data granularity to be able to identify, evaluate, extract, employ and manage the data and data products from GOES-R.
GSFPS-2219	GS Ktr	Base	The GS shall generate metadata that contains all mandatory attributes and relevant optional attributes of the ISO 19115 - Metadata standard.

ID	Dev. Org.	Option	Requirement
GSFPS-2929	GS Ktr	Base	The GS shall generate metadata that is compliant with ISO 19115-2 - Geographic Information - Metadata - Part 2: Extensions for imagery and gridded data.
GSFPS-3073	GS Ktr	Base	The GS shall generate metadata that is compliant with ISO/TR 19121 - Geographic Information - Imagery and Gridded Data.
GSFPS-2793	GS Ktr	Base	The GS shall generate metadata compliant with FGDC standards.
GSFPS-2794	GS Ktr	Base	The GS shall generate metadata that is compliant with ISO 19130 - Sensor and data model for imagery and gridded data (includesSensorML).
GSFPS-2930	GS Ktr	Base	The GS shall generate metadata that is compliant with ISO 19136 - Geography Markup Language (GML).
GSFPS-2931	GS Ktr	Base	The GS shall generate metadata that is compliant with ISO 19138 - Data quality measures.
GSFPS-2932	GS Ktr	Base	The GS shall generate metadata that is compliant with ISO 19139 - Metadata - XML Schema Implementation.
GSFPS-3074	GS Ktr	Base	The GS shall generate metadata that is compliant with ISO 6709 Standard representation of latitude, longitude and altitude for geographic point locations.
GSFPS-3196	GS Ktr	Base	The GS shall generate metadata that is compliant with ISO 19109 - Geographic information -- Rules for Application Schema. (CCR01285)
GSFPS-3195	GS Ktr	Base	The GS shall generate metadata that is compliant with ISO 19113 - Geographic information -- Quality principles. (CCR01285)
GSFPS-3197	GS Ktr	Base	The GS shall generate metadata that is compliant with ISO 19114 - Geographic information -- Quality evaluation procedures. (CCR01285)
GSFPS-2933	GS Ktr	Base	The GS shall generate metadata that includes metadata attributes that are generated by current legacy GOES products.
GSFPS-2934	GS Ktr	Base	The GS shall generate metadata that supports anomaly recognition.
GSFPS-2935	GS Ktr	Base	The GS shall generate metadata that supports operational quality assessment.
GSFPS-2936	GS Ktr	Base	The GS shall generate metadata that supports operational applications and decision support systems.
GSFPS-2937	GS Ktr	Base	The GS shall generate metadata that supports scientific use including information that is necessary for discipline area and interdisciplinary studies.
GSFPS-2938	GS Ktr	Base	The GS shall generate metadata that supports long term preservation, including information necessary to identify the data in the long-term future and to sufficiently characterize that data so that it can be used in climatological science to construct a climate record.
GSFPS-2939	GS Ktr	Base	The GS shall generate metadata using a model that is extensible.
GSFPS-2795	GS Ktr	Base	The GS shall generate metadata files that include data provenance.
GSFPS-2940	GS Ktr	Base	The GS shall generate metadata needed for archival and stewardship.
GSFPS-2941	GS Ktr	Base	The GS shall generate metadata required for data reprocessing.

ID	Dev. Org.	Option	Requirement
GSFPS-2942	GS Ktr	Base	The GS shall generate metadata required for real-time processing and use by NWS.
GSFPS-2943	GS Ktr	Base	The GS shall generate metadata required for processing and use by OSDPD.
GSFPS-3094	GS Ktr	Base	The GS shall create end-product attribute reports.
GSFPS-2221			7.5 Product Generation Supervision
GSFPS-2223	GS Ktr	Base	The GS shall monitor and report PG status.
GSFPS-2225	GS Ktr	Base	The GS shall notify operators of data and product anomalies.
GSFPS-2229	GS Ktr	Base	The GS shall enable operations analyses of anomalous conditions.
GSFPS-2231	GS Ktr	Base	The GS shall manage anomaly investigation reports in a database for the life of the mission.
GSFPS-2544	GS Ktr	Base	The GS shall capture event messages of PG events.
GSFPS-2546	GS Ktr	Base	The GS shall selectively filter PG event messages based on operator designation for forwarding to EM.
GSFPS-2547	GS Ktr	Base	The GS shall forward filtered event messages of PG events to EM.
GSFPS-2233			7.6 Generate Level 1 Products
GSFPS-2789	GS Ktr	Base	The GS shall produce L1b products for all non-diagnostic data-producing instrument modes of the satellite in accordance with Appendix A, Table 1.
GSFPS-3101	GS Ktr	0001	The GS shall produce L1b products for all non-diagnostic data-producing instrument modes of the satellite in accordance with Appendix D.
GSFPS-3097	GS Ktr	Base	The GS shall produce GRB products for uplink at the rate at which the instruments produce data on a swath-by-swath basis.
GSFPS-2235	GS Ktr	Base	The GS shall collect L1b product quality metrics to include loss of source data input and number of outlier detections.
GSFPS-2554	GS Ktr	Base	The GS shall append instrument derived calibration and navigation information for those L1b products not resampled to the fixed grid.
GSFPS-2237	GS Ktr	Base	The GS shall assemble GOES-R products and associated metadata nominally produced at WCDAS for GRB uplink in accordance with the following allocation: a) LHCP: L1b products from ABI 0.64 um band and 6 IR bands (3.9, 6.185, 7.34, 11.2, 12.3, and 13.3 um) b) RHCP: L1b products from ABI bands 0.47, 0.865, 1.378, 1.61, 2.25, 6.95, 8.5, 9.6 and 10.35 um, L2+ GLM, L1b SUVI, L1b EXIS, and L1b SEISS products as specified in Appendices A-D, and Magnetometer data
GSFPS-2555	GS Ktr	Base	The GS shall apply lossless compression for GRB.
GSFPS-2556	GS Ktr	Base	The GS shall format all data for transfer over the GRB link using CCSDS 133.0-B-1 Section 4.1 Protocol Data Unit.

Check the VSDE at <https://vsde.nasa.gov/vsde/portal> to verify correct version prior to use.

ID	Dev. Org.	Option	Requirement
GSFPS-2557	GS Ktr	Base	The GS shall constrain the GRB CCSDS Space Packet data zone to not exceed 16,384 octets.
GSFPS-2559	GS Ktr	Base	The GS shall append a CRC integrity measure to each GRB Space Packet.
GSFPS-2680	GS Ktr	Base	The GS shall provide GRB Information Packets each 5 minutes that include, at a minimum: <ul style="list-style-type: none"> a) For ABI: <ul style="list-style-type: none"> 1) ABI operations mode 2) ABI coverage scheduling b) For All Instruments: <ul style="list-style-type: none"> 1) Instrument Calibration Data necessary for L1b processing 2) Messages for other than operational instrument modes 3) Events either occurring or planned that impact routine data coverage
GSFPS-2681	GS Ktr	Base	The GS shall generate emulated GVAR (eGVAR) data in accordance with the Ground Segment (GS) to GOES N/O/P Ground System Interface Requirements Document (IRD) (P 417-R-IRD-0158).
GSFPS-3150	GS Ktr	Base	The GS shall generate eGVAR using the following ABI bands: 0.64, 3.9, 6.19, 11.2, and 13.3 um.
GSFPS-3151	GS Ktr	Base	The GS shall generate eGVAR from Full Disk ABI scans every 30 minutes.
GSFPS-2548	GS Ktr	Base	The GS shall generate the L1b products in accordance with Government-supplied algorithms.
GSFPS-2549	GS Ktr	Base	The GS shall report outliers detected such as saturated samples during the ABI resampling process.
GSFPS-2550	GS Ktr	Base	The GS shall store in a separate file in the 7-day revolving temporary storage a record of the sample array used in the ABI resampling to a fixed grid pixel, when outlier(s) are detected.
GSFPS-2354	GS Ktr	Base	The GS shall provide eGVAR data in accordance with the Ground Segment (GS) to GOES N/O/P Ground System Interface Requirements Document (IRD) (P 417-R-IRD-0158).
GSFPS-2926	GS Ktr	Base	The GS shall create L1b product metadata that includes an accounting of uncorrectable errors detected in the raw data link that propagate to L1b, algorithm software version, and instrument serial number.
GSFPS-3075	GS Ktr	Base	The GS shall include L1b product quality metrics in the L1b metadata.
GSFPS-3076	GS Ktr	Base	The GS shall append the L1b metadata to the L1b product.
GSFPS-3077	GS Ktr	Base	The GS shall use a separate APID in the CCSDS Header unique for each data type.
GSFPS-3079	GS Ktr	Base	The GS shall produce L1b products for diagnostic data-producing instrument modes of the satellite in which the data produced by the instruments supports L1b product generation.
GSFPS-3080	GS Ktr	Base	The GS shall identify L1b products generated from diagnostic data-producing instrument modes.

Check the VSDE at <https://vsde.nasa.gov/vsde/portal> to verify correct version prior to use.

ID	Dev. Org.	Option	Requirement
GSFPS-2243			7.7 Instrument Radiometric (including Photometric) and Energetic Particle Calibration
GSFPS-2249	GS Ktr	Base	The GS shall perform instrument radiometric (including photometric) or energetic particle calibration for each instrument using calibration algorithms supplied by the Government and calibration database constants developed by each instrument vendor and provided by the Government.
GSFPS-2251	GS Ktr	Base	The GS shall receive instrument calibration databases and database updates from the Government.
GSFPS-2956	GS Ktr	Base	The GS shall apply the instrument radiometric and energetic particle calibration to the data to produce L1b products.
GSFPS-2563	GS Ktr	Base	The GS shall ingest calibration databases.
GSFPS-2564	GS Ktr	Base	The GS shall implement instrument calibration databases.
GSFPS-2257	GS Ktr	Base	The GS shall receive pre-launch vendor detector selection tables to be used to baseline the condition of the detector array.
GSFPS-2259	GS Ktr	Base	The GS shall maintain ABI detector selection tables.
GSFPS-3081	GS Ktr	Base	The GS shall provide for variable ABI bit depth quantities by band as long as radiance precision is maintained in order to conserve GRB bandwidth.
GSFPS-2267			7.8 Generate Level 2+ Products
GSFPS-2565	GS Ktr	Base	The GS shall ingest L1b data as input to L2+ product processing.
GSFPS-2289	GS Ktr	Base	The GS shall capture L2+ product quality measurements of derived content measure that include average, maximum and minimum content values.
GSFPS-2287	GS Ktr	Base	The GS shall create the L2+ products.
GSFPS-2271	GS Ktr	Base	The GS shall receive ancillary data from the ADRS in accordance with the Ground Segment (GS) To Ancillary Data Relay System (ADRS) Interface Requirements Document (IRD) (P 417-R-IRD-0157).
GSFPS-2283	GS Ktr	Base	The GS shall manage product algorithm software, documentation and metadata.
GSFPS-2927	GS Ktr	Base	The GS shall create L2+ product metadata that includes an accounting of uncorrectable errors propagated to L2+ products, L2+ quality metrics, L2+ end-product performance parameter compliance metrics, algorithm software version, ancillary data version(s), and instrument serial number.
GSFPS-3181	GS Ktr	Base	The GS shall append the L2+ metadata to the L2+ product.
GSFPS-2293			7.9 Product Generation Storage
GSFPS-2295	GS Ktr	Base	The GS shall assign a unique file identifier to each product.
GSFPS-2297	GS Ktr	Base	The GS shall create and append an integrity measurement to all products processed through the GS.

ID	Dev. Org.	Option	Requirement
GSFPS-2301	GS Ktr	Base	The GS shall store L1b product quality measurements of derived content measure that include average, maximum and minimum content values for the life of the mission.
GSFPS-2818			7.10 GOES Rebroadcast Simulator
GSFPS-2682	GS Ktr	Base	The GS shall provide a standalone simulation of the GRB rebroadcast data stream for local, on-site testing of user ingest and data handling systems.
GSFPS-2796	GS Ktr	Base	The GRB Simulator shall be portable/transportable.
GSFPS-2797	GS Ktr	Base	The output of the GRB Simulator shall be consistent with the GRB output, including physical layer link characteristics specified in the Space Segment to GOES Rebroadcast IRD, 417-R-IRD-0002, and subsequent Space Segment ICDs. (CCR01328)
GSFPS-2798	GS Ktr	Base	The GRB Simulator shall have user selectable "off-line" mode (e.g., for operator interactive activities of scenario and test pattern creation or modification, configuration definition).
GSFPS-2799	GS Ktr	Base	The GRB Simulator shall have a user selectable "on-line" mode (for output of GRB).
GSFPS-2800	GS Ktr	Base	The GRB Simulator shall output data, without user intervention, over a period of at least 5-days, incrementing all time and header fields in a realistic manner and in accordance with the expectation of the GRB section of the Product Definition and Users' Guide (CDRL SE-16). (CCR01328)
GSFPS-2801	GS Ktr	Base	The GRB Simulator shall output data utilizing user defined scenarios and configurations.
GSFPS-2802	GS Ktr	Base	The GRB Simulator shall provide for user (manual) creation of scenarios, configurations, and test patterns for use by the operator.
GSFPS-2803	GS Ktr	Base	The GRB Simulator shall provide for the input of scenarios, configurations, test patterns, and proxy data from externally created files.
GSFPS-2804	GS Ktr	Base	The GRB Simulator shall store scenarios, configurations, test patterns, and proxy data files for use as directed by the user.
GSFPS-2805	GS Ktr	Base	The GRB Simulator shall accept a user configurable starting point for simulations, e.g. time of day, day of year, and data content.
GSFPS-2806	GS Ktr	Base	The GRB Simulator shall output user modifiable/configurable content based on GRB Scenarios currently being output.
GSFPS-2807	GS Ktr	Base	The GRB Simulator shall create user designated errors (type and frequency) in the output stream when so directed.
GSFPS-2808	GS Ktr	Base	The GRB Simulator shall output GRB at IF.
GSFPS-2809	GS Ktr	Base	The GRB Simulator shall output GRB at baseband.
GSFPS-2810	GS Ktr	Base	The GRB Simulator shall display its status to the user, including real-time, simulation-time, and configuration and test/proxy data in use.
GSFPS-2811	GS Ktr	Base	The GRB Simulator shall require only generally available hand tools for take-down and packing for shipment from a site, and un-packing and set-up on receipt at a site.

Check the VSDE at <https://vsde.nasa.gov/vsde/portal> to verify correct version prior to use.

ID	Dev. Org.	Option	Requirement
GSFPS-2813	GS Ktr	Base	The GRB Simulator shall provide user definition of header and documentation fields at the word level.
GSFPS-2814	GS Ktr	Base	The GRB Simulator shall provide user selectable pattern generation for data fields.
GSFPS-2815	GS Ktr	Base	The GRB Simulator shall provide user selection of stored and imported (externally prepared) files for header, documentation, and data fields.
GSFPS-2816	GS Ktr	Base	The GRB Simulator shall maintain an event log.
GSFPS-2817	GS Ktr	Base	The GRB Simulator shall generate time field values based on "on-line" mode user selection of either a fixed reference time or actual wall-clock time.
GSFPS-2958			7.11 Operational Instrument Calibration Data Metrics Monitoring
GSFPS-2959	GS Ktr	Base	<p>The GS shall be capable of operational monitoring and display of the operational (current and trended) values for the following Instrument Calibration Data parameters:</p> <ul style="list-style-type: none"> a) ABI Component temperatures <ul style="list-style-type: none"> 1) Blackbody 2) Mirrors 3) Detector (patch) 4) Baseplate 5) Electronics 6) Cooler (or cooler housing) b) Radiometric Data (Note: 6 and 7 are for ABI calibration drift correction) <ul style="list-style-type: none"> 1) Noise (NEDN/NEDT) 2) Calibration coefficients (such as intercept and slope) 3) Blackbody counts 4) Space view counts 5) Radiometric PRT counts 6) Lunar scans 7) Star catalog scans c) GLM electronic and scene data collected for calibration on command (slew spacecraft to collect non-earth scene) d) SUVI electronic calibration collected on command.
GSFPS-2960	GS Ktr	Base	The GS shall provide the capability to remotely view the current and trended Instrument Calibration Data metrics displays from external algorithm maintenance or calibration / validation facilities.
GSFPS-2326			8 PRODUCT DISTRIBUTION REQUIREMENTS
GSFPS-2328			8.1 Overview
GSFPS-2567			Section 8 specifies the PD element functionality of the GOES-R GS. The PD element provides real-time continuous network distribution of GS products and data. The GOES-R Access Subsystem portion of PD includes revolving temporary 7-day storage of products and data. It also includes the GOES-R Access Point that provides product availability for, and distribution to users. The GOES-R Access Subsystem will be designed, developed, and transitioned by the OSD organization with support from the GSP for GS integration.

ID	Dev. Org.	Option	Requirement
GSFPS-2330			Data and information will be provided by the PD functionality in support of authorized GOES-R users.
GSFPS-3152			PD is responsible for any reformatting, reprojection, subsetting (sectorizing), and routing for distribution to the AWIPS interface. AWIPS data is routed to NWS per the GOES-R Series Ground Segment (GS) to Advanced Weather Interactive Processing System (AWIPS) Interface Requirements Document (IRD) (P417-R-IRD-0160).
GSFPS-2332			The major PD functions are: <ul style="list-style-type: none"> a) Delivery of products and associated supporting data for long-term archive to CLASS b) Delivery of products and mission data to satisfy product subscriptions and one-time delivery of products and mission data to meet latency delivery requirements c) Delivery of sectorized cloud and moisture imagery to AWIPS
GSFPS-2338			8.2 Product and Data Dissemination
GSFPS-2340	All	Base	The GS shall make available all L1b and L2+ products as specified in Appendix A through the GOES-R Access Point.
GSFPS-2342	GS Ktr	Base	The GS shall send products and data to CLASS for archive in accordance with the Ground Segment (GS) To Comprehensive Large Array-Data Stewardship System (CLASS) Interface Requirements Document (IRD) (417-R-IRD-0090).
GSFPS-2344	OSD		The GS shall acknowledge receipt of data requests within ten seconds (10 seconds) (TBR).
GSFPS-2569	GS Ktr	Base	The GS shall provide Instrument Calibration Data to include star looks (instrument CAL, Instrument CAL / drift), blackbody temperatures, mirror temperatures, space look, and lunar observations to the GOES-R Access Subsystem.
GSFPS-3082	OSD		The GS shall limit data subscriptions based on operator configurable parameters (e.g., total duration, and single request data volume).
GSFPS-3161	GS Ktr	Base	The GS shall produce CLASS Submission Manifests, in accordance with the Submission Agreements between GOES-R Ground Segment and NGDC/NCDC [CDRL SE-20] that identify all data, information and products to be sent to CLASS for long-term archival storage.
GSFPS-3162	GS Ktr	Base	The GS shall produce CLASS Manifest activity reports, in accordance with the Submission Agreements between GOES-R Ground Segment and NGDC/NCDC [CDRL SE-20], containing a 72-hour data submission summary.
GSFPS-3163	GS Ktr	Base	The GS shall produce CLASS File activity reports, in accordance with the Submission Agreements between GOES-R Ground Segment and NGDC/NCDC [CDRL SE-20], containing a 72-hour summary of files sent to CLASS.
GSFPS-3164			The operator will have the capability to configure which products are to be sent to CLASS, and adjust the archive status of any output product (based on policy decisions). Whenever the GS produces a product, data item, or file identified as "for archive," the GS will make it available for transmission to CLASS in accordance with the GS to CLASS IRD.

ID	Dev. Org.	Option	Requirement
GSFPS-3165	GS Ktr	Base	The GS shall have the capability for the operator to change the long-term archival storage status of any GS products, data item or file (i.e., identify as "for archive" or "not for archive.")
GSFPS-2356			8.3 Authorized User Services
GSFPS-2995			The GS will have the capability to build a set of sectorized products per satellite for forwarding to the NWS AWIPS. Each product in the set will be defined by the operator. Products will be defined based on six parameters--corner points, map projection, spatial resolution, bit depth, ABI channel, and periodicity. The full set of sectorized products established by these parameters will be forwarded to AWIPS as they are produced. GS performance requirements with respect to sectorized products are defined in Appendix E.
GSFPS-2358	GS Ktr	Base	The GS shall provide all sectorized cloud and moisture imagery products to the NWS using the transfer mechanism specified in the Ground Segment (GS) To Advanced Weather Interactive Processing System (AWIPS) Interface Requirements Document (IRD) (417-R-IRD-0160).
GSFPS-3128	GS Ktr	Base	The GS shall be capable of producing sectorized products in accordance with Appendix E.
GSFPS-2996	GS Ktr	Base	The GS shall provide the capability to modify the set of operator-defined sectorized cloud and moisture imagery products.
GSFPS-2998	GS Ktr	Base	The GS shall provide the capability for operator modification of sectorized cloud and moisture imagery product parameters.
GSFPS-3083	GS Ktr	Base	The GS shall be capable of producing sectorized cloud and moisture imagery products based on any single operator-selected ABI channel.
GSFPS-2957	GS Ktr	Base	The GS shall be capable of producing an operator-defined set of sectorized cloud and moisture imagery products.
GSFPS-3084	GS Ktr	Base	The GS shall have the capability to define sectorized cloud and moisture imagery products from CONUS imagery based on the following operator-configured parameters <ul style="list-style-type: none"> a) Geographic coordinate corner points b) Map projection c) Spatial resolution d) Bit depth scaling e) ABI channel f) Periodicity
GSFPS-3085	GS Ktr	Base	The GS shall have the capability to define sectorized cloud and moisture imagery products from Mesoscale imagery based on the following operator-configured parameters: <ul style="list-style-type: none"> a) Map projection b) Spatial resolution c) Bit depth scaling d) ABI channel e) Periodicity

ID	Dev. Org.	Option	Requirement
GSFPS-3086	GS Ktr	Base	The GS shall have the capability to define sectorized cloud and moisture imagery products from Full Disk imagery based on the following operator-configured parameters: <ul style="list-style-type: none"> a) Geographic coordinate corner points b) Map projection c) Spatial resolution d) Bit depth scaling e) ABI channel f) Periodicity
GSFPS-2684	GS Ktr	Base	The GS shall have the capability to remap sectorized cloud and moisture imagery products to the following projections: <ul style="list-style-type: none"> a) Mercator b) Lambert Conformal c) Polar Stereographic
GSFPS-2687	GS Ktr	Base	The GS shall have the capability to scale sectorized cloud and moisture imagery products across a range from full resolution to 8 bits based on operator configuration.
GSFPS-2688	GS Ktr	Base	The GS shall be capable of producing operator-defined reduced-resolution sectorized cloud and moisture imagery products with spatial resolution size range between 0.5 km and 28 km.
GSFPS-3000	GS Ktr	Base	The GS shall be capable of producing sectorized products with an operator-defined periodicity equal to or less frequently than the parent cloud and moisture imagery products are produced by the GS.
GSFPS-2576	OSD		The GS shall make any item placed in the 7-day revolving temporary storage by the GOES-R GS available through the GOES-R Access Point.
GSFPS-2366	OSD		The GS shall collect performance measurements on GOES-R Access Point new and retiring users, user requests, request acknowledgements, data and product transmissions and transaction information / latency.
GSFPS-1487	OSD		The GS shall manage user account information, including: user contact information, the level of service a user is authorized to request, links to related log entries, and user organization information.
GSFPS-2368	OSD		The GS shall report on GOES-R Access Point performance measurements.
GSFPS-2370	OSD		The GS shall administer GOES-R Access Point User accounts.
GSFPS-2372	OSD		The GS shall provide access to mission operations data sent from mission management to the GOES-R Access Subsystem. (CCR01330)
GSFPS-2578	GS Ktr	Base	The GS shall provide mission operations data, satellite configuration, instrument imaging schedules, maneuver schedules, special operations schedules, calibration plans and activities, unique payload configuration and status, spacecraft ephemerides, and acquisition data to the GOES-R Access Subsystem. (CCR01330)

ID	Dev. Org.	Option	Requirement
GSFPS-2374	OSD		The GS shall provide an Identification and Authentication mechanism, separate from that for operations personnel, for external Users (NIST SP 800-82) that meets the electronic authentication (eAuthentication) requirements of OMB M-04-04, E-Authentication Guidance for Federal Agencies, and NIST SP 800-63, Electronic Authentication Guideline.
GSFPS-2376	OSD		The GS shall provide a subscription service to GOES-R Access Point Users that allows subscriptions to be configured by a minimum of the following parameters: a) Geographic Coverage Area b) Date c) Time d) Time period e) Product ID / name f) Quality flags g) Data format h) Spacecraft ID i) Channel number j) Instrument name k) Instrument mode l) Instrument Calibration Data
GSFPS-2689	OSD		The GS shall provide a data and information query service to GOES-R Access Point Users including at a minimum the following searchable parameters: a) Geographic Coverage Area b) Date c) Time d) Time period e) Product ID / name f) Quality flags g) Data format h) Spacecraft ID i) Channel number j) Instrument name k) Instrument mode l) Instrument Calibration Data
GSFPS-2690	OSD		The GS shall provide an ad hoc request service to GOES-R Access Point Users.
GSFPS-2380	OSD		The GS shall support a minimum of 1,000 users connected simultaneously to the GOES-R Access Point.
GSFPS-2382	OSD		The GS shall accommodate concurrent transfers of product files to 100 (TBR) ad hoc users through the GOES-R Access Point.
GSFPS-2916	OSD		The GS shall begin transfer of any requested and available product from the GOES-R Access Point to the requester within five (5) seconds (TBR) of ad hoc request validation.
GSFPS-2917	OSD		The GS shall begin the transfer of a subscribed product consistent with the latency in Appendix B, for those subscriptions fulfilled via the GOES-R Access Point. (CCR01291)
GSFPS-2384	OSD		The GS shall receive data requests from Users to the GOES-R Access Point.

ID	Dev. Org.	Option	Requirement
GSFPS-2386	OSD		The GS shall validate data requests from Users to the GOES-R Access Point.
GSFPS-2388	OSD		The GS shall store data requests from Users to the GOES-R Access Point for 90 days in a product distribution log.
GSFPS-2390	OSD		The GS shall check for duplicate data and product requests from the same GOES-R Access Point User as part of the request validation process.
GSFPS-2392	OSD		The GS shall provide help information to GOES-R Access Point Users when setting up their requests.
GSFPS-2406	OSD		The GS shall disseminate reports of status of queries and requests upon request from GOES-R Access Point Users.
GSFPS-2408	OSD		The GS shall fulfill requests from Users for product retransmission via the GOES-R Access Point for up to 7-days after product generation.
GSFPS-2412	OSD		The GS shall collect product availability and status information.
GSFPS-2577	OSD		The GS shall report product availability and status information.
GSFPS-2414	OSD		The GS shall provide product status to GOES-R Access Point Users on request.
GSFPS-2420			8.4 Data Product Delivery
GSFPS-2582	GS Ktr	Base	The GS shall forward filtered event messages of product distribution events to EM.
GSFPS-2581	GS Ktr	Base	The GS shall selectively filter PD event messages based on operator designation for forwarding to EM.
GSFPS-2691	All (CCR-01290)	Base	The GS shall collect and report to EM performance measures at a level of detail sufficient to assess the margin on a per-process and per-product basis for product latency and refresh.
GSFPS-2579	All (CCR-01290)	Base	The GS shall capture event messages of product distribution events.
GSFPS-2428	OSD		The GS shall process a minimum of 200 (TBR) simultaneous subscription service data transfers.
GSFPS-2422	OSD		The GS shall notify subscription users with a product manifest when the subscribed products are available at the GOES-R Access Point.
GSFPS-2424	OSD		The GS shall post the product manifest within 1 second after a product is posted to the GOES-R Access Point.
GSFPS-3137	OSD		The GS shall be capable of transferring data from the GOES-R Access Point to users at a minimum combined rate of 500 Mbps (TBR).
GSFPS-3153	OSO		The GS shall transfer data from the GOES-R Access Point to users at a minimum combined rate of 500 Mbps (TBR).
GSFPS-2583			8.5 Product Distribution Storage
GSFPS-2303	OSD		The GS shall store L1b and L2+ products with accompanying ancillary and metadata, Instrument Calibration Data, and the sample outlier files in a 7-day revolving temporary store at the NSOF.

ID	Dev. Org.	Option	Requirement
GSFPS-3113	OSD		The GS shall have the capability to retrieve, display, export, and store for the life of the mission operator-selected data from the 7-day revolving temporary storage.
GSFPS-2305	OSD		The GS shall have the capability to parse product and related metadata held in temporary storage by source, time, and time duration for export to removable media.

This page intentionally left blank.

Appendix A: End Product Performance Parameter Tables

Release Number - Subset of the total GOES-R products indicating which products are required for implementation at certain delivery milestones.

Product Geographic Coverage / Conditions - Product geographic coverage is defined as the size of the area that must be observed in the revisit time in order to complete the product; in the case of CONUS, it also specifies a particular area as well as location. The GOES-R products will be calculated for the coverage areas of the L1b data provided by the instrument subject to the Product Qualifiers.

Product Orthogonality / Coverage - Product Orthogonality / Coverage is defined for the Space and Solar Products only and is nominally the equivalent of the Product Geographic Coverage.

Product Vertical Resolution - Product vertical resolution is defined as layering averaging of the resultant samples corresponding to different heights in the atmosphere; where only one vertical sample is collected, no layer averaging is needed. The GOES-R System will produce the required vertical layering of the GOES-R products employing external data sources if needed. For typical imaging products, the vertical layering is typically over the total column.

Product Horizontal Resolution - Product horizontal resolution is defined as the finest horizontal spatial element of the product measured at nadir. The GOES-R System will not spatially degrade the product horizontal resolution beyond that of the L1b data of the earth-looking instruments when making Level 2 and higher products, except in the generation of GOES-R products with coarser horizontal resolution.

Product Horizontal/Angular Resolution - Product Horizontal/Angular Resolution is defined for the Space and Solar Products only and is nominally the equivalent of the Product Horizontal Resolution.

Product Mapping Accuracy (Product Navigation) - Product navigation or more generally product mapping accuracy is defined as the accuracy of the registration of the collected data to the appropriate earth or other reference frame. The GOES-R System will geolocate the GOES-R series L1b data (which meets instrument image navigation and registration requirement for earth-looking instruments) to comply with the product mapping accuracy requirements.

Product Pointing/Mapping Accuracy - Product Pointing/Mapping Accuracy is defined for the Space and Solar Products only and is the equivalent of the Product Mapping Accuracy.

Product Pointing Knowledge / Mapping Uncertainty - Product Pointing Knowledge / Mapping Uncertainty is defined for the Space and Solar Products only as the knowledge of the line of sight of the space and solar instruments.

Product Measurement Range - Product Measurement Range is defined as the range from the minimum to the maximum values over which the product will be measured.

Categorical Product -- A product whose output is limited to a set of discrete values. (CCR01326)

Product Measurement Accuracy (non-categorical products) - Product Measurement Accuracy is defined for non-categorical products as the systematic difference or bias between the derived parameter and truth. It is determined by computing the absolute value of the average of differences between the derived parameter and truth over a statistically significant population of data such that the magnitude of the random error is negligible relative to the magnitude of the systematic error. (CCR01292)

Product Measurement Accuracy (categorical products) - Product Measurement Accuracy for categorical products is defined in terms of the percentage of correct classification over a statistically significant population of data. (CCR01292)

Product Refresh Rate/Coverage Time - Product Refresh Rate/Coverage Time is defined as the time between the completion of the nth update of the product and the completion of the (n+1)th update of the same product for the user. The GOES-R baseline product tables list refresh times for products. However, ABI data may be produced more frequently than the listed times, particularly due to the different scan modes of ABI. Products that rely on surface observations with product refreshes that are long, compared to the instrument image refresh times, benefit from observations without obscurations caused by clouds. The product refresh is often longer than the coverage time associated with the data collection, as with the GLM in which case the longer of the two is listed for this composite parameter. (CCR01282)

Ground Data Latency - Product-dependent baseline maximum time allocated to the GS, defined as:

Check the VSDE at <https://vsde.nasa.gov/vsde/portal> to verify correct version prior to use.

- a) the time between the receipt of the last image data packet on the ground and delivery to the AWIPS demarcation point in the case of sectorized products, and
- b) the time between the receipt of the last image data packet on the ground and the end-point of the GOES-R Access Subsystem in the case of all other products. (CCR01333)

Vendor Allocated Ground Latency - Product-dependent baseline maximum time allocated to the GS vendor, defined as the time between the arrival of the last data packet of an observation at the intermediate frequency conversion and the arrival of the last bit of a GOES-R product at either:

- a) the AWIPS demarcation point in the case of sectorized products, or
- b) the ingest point of the GOES-R Access Subsystem in the case of all other products. (CCR01333)

Antenna Allocated Ground Latency - Sum of the 1) Baseline maximum time allocated between the receiving of the data in the last packet of the observation at the RF input to the antenna and the intermediate frequency conversion and 2) Baseline maximum time between the intermediate frequency on the transmit side of the GRB transmitter on the ground at CDAS and the intermediate frequency on the received side of the GRB transmitter on the ground at NSOF. (CCR01333)

GOES-R Access Subsystem Allocated Ground Latency - Baseline maximum time between the arrival of the last bit of a GOES-R product at the ingest point of the GAS and:

- a) the time when the file is ready to be pushed to the external recipient
- b) the time when the file is staged and available to be pulled by the external recipient. (CCR01333)

Product Long-Term Stability - Product Long Term Stability is defined as the deviation in accuracy over a period of time, typically the lifetime of the mission, unless otherwise specified in the product long-term stability values.

Product Measurement Precision (non-categorical products) - Product measurement precision is the one-sigma standard deviation of the differences between the derived parameters and their corresponding truth over the same population of data used to compute the product measurement accuracy. (CCR01292)

Product Measurement Precision (categorical products) - Product Measurement Precision for categorical products is:

- a) For three or more categories: defined as the standard deviation of the misclassification error (number of bins away from the correct bin) over a statistically significant population of data.
- b) For two categories: not applicable. (CCR01292)

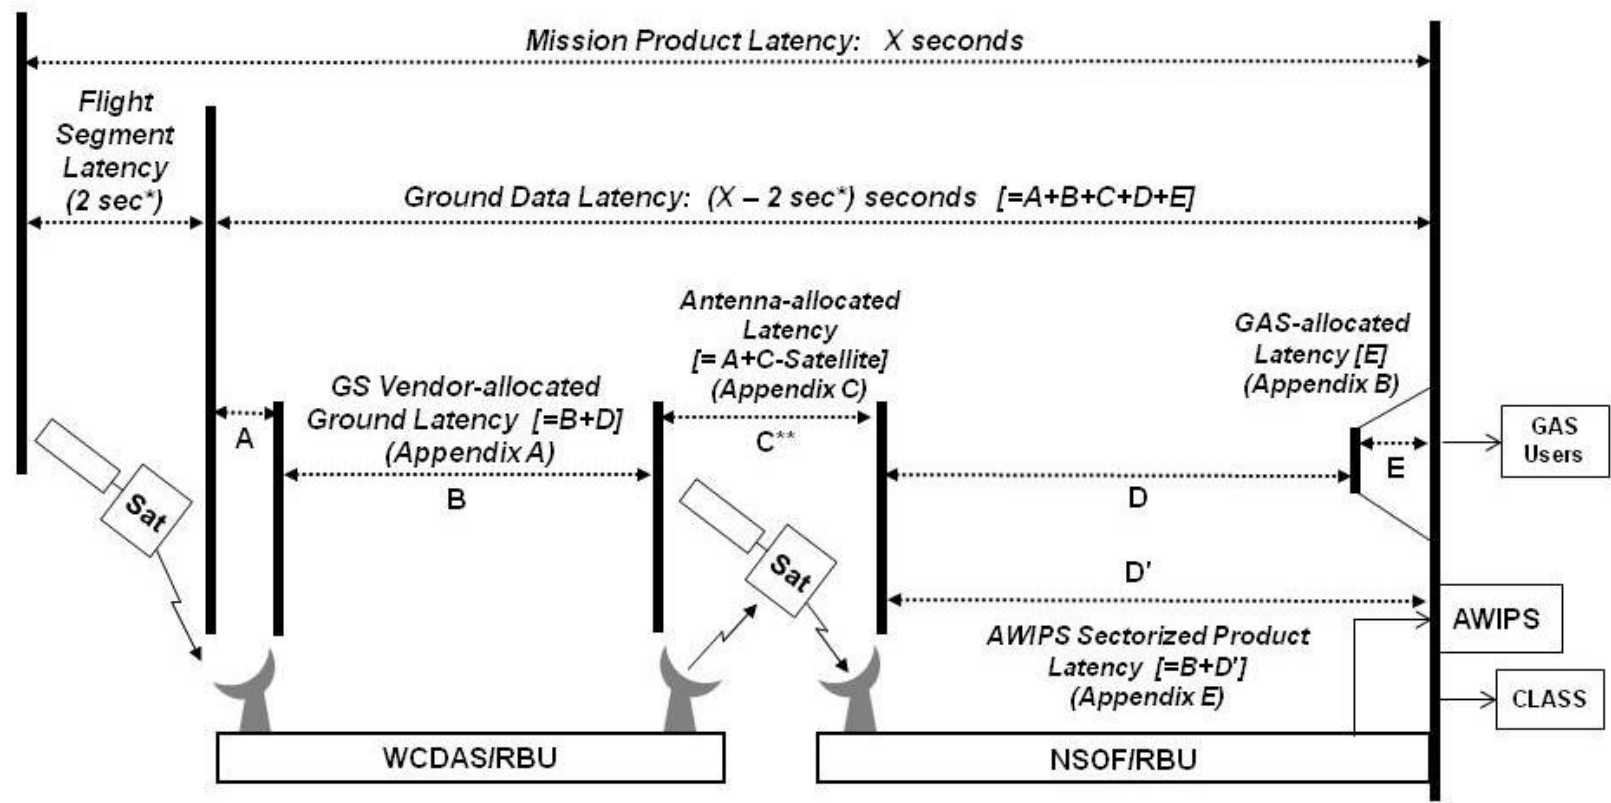

Temporal Coverage Qualifier - The Temporal Coverage Qualifier provides product-specific limitations to the solar zenith angle coverage of the products. When the term Day is used in the temporal qualifier, Day is defined as solar zenith angles less than or equal to 96 degrees. When the term Night is used in the temporal qualifier, Night is defined as solar zenith angles greater than 96 degrees and includes the period of twilight.

Product Extent Qualifier - The Product Extent Qualifier provides product specific limitations to the solar zenith angle coverage of the products over which a product can be computed. The use of the term quantitative in any of the product extent qualifiers defines the generation of the product while meeting the threshold product measurement accuracy performance in that region, whereas the use of qualitative in any of the product extent qualifiers defines the generation of the product without meeting the threshold product measurement accuracy performance requirements. For CONUS (3000 km x 5000 km) products and mesoscale (1000 km x 1000 km) products, the product will be computed within the CONUS-sized measurement area and the mesoscale-sized measurement area that falls within the product qualifier limitations.

Cloud Cover Conditions Qualifier - The Cloud Cover Conditions Qualifier provides product specific limitations to the cloud cover associated with the threshold accuracy.

Product Statistics Qualifier - The Product Statistics Qualifier provides product specific limitations, where applicable, to the product generation scene statistics under which the product measurement accuracies apply.

Allocation of Mission Product Latency

* Flight Segment Latency is 2 seconds for all products except Solar Imagery: X-Ray, which is 4 sec
** This latency period includes the satellite transponder time for GRB (<1 millisecond)

Figure 2: Allocation of Mission Product Latency (CCR-01365)

Effective Date: Date of Last Signature
Responsible Organization: GOES-R/Code 417

G417-R-FPS-0089
Version 1.8

NOTE: There are 54 KPP Cloud and Moisture Imagery End-Products (48 single band End-Products in NETCDF format at the resolution native to each band and one multiband product at 2 km resolution in both NETCDF & McIDAS Area file formats). This number is arrived at as follows:

Single band products: 16 products * 1 format (NETCDF) * 3 coverage areas (Full Disk, CONUS, Mesoscale)
Multiband products: 1 product * 2 formats (NETCDF and McIDAS Area)* 3 coverage areas (Full Disk, CONUS, Mesoscale)
(CCR01313, CCR01368)

NOTE: The number of Derived Motion Winds End-Products is derived from 6 unique outputs multiplied by 3 coverage areas in two formats each.

Check the VSDE at <https://vsde.nasa.gov/vsde/portal> to verify correct version prior to use.

Appendix A Table 2: Product Qualifiers

Appendix A Table 2: Product Qualifiers				
Observational Requirements	Temporal Coverage Qualifiers (Threshold)	Product Extent Qualifier (Threshold)	Cloud Cover Conditions Qualifier (Threshold)	Product Statistics Qualifier (Threshold)
Observational Requirements: ATMOSPHERE				
AEROSOLS				
Aerosol Detection (including Smoke and Dust)	Day	Quantitative out to at least 60 degrees LZA (Threshold) and qualitative at larger LZA	Clear conditions down to feature of interest associated with threshold accuracy	Over specified geographic area
Aerosol Particle Size	Day	Quantitative out to at least 60 degrees LZA (Threshold) and qualitative at larger LZA	Clear conditions down to feature of interest associated with threshold accuracy	Over specified geographic area
Suspended Matter / Optical Depth	Daytime at a minimum	Quantitative out to at least 60 degrees LZA (Threshold) and qualitative beyond	Clear conditions down to feature of interest associated with threshold accuracy	Over specified geographic area
Volcanic Ash: Detection and Height	Day and night	Quantitative out to at least 60 degrees LZA (Threshold) and qualitative beyond	Clear conditions down to feature of interest associated with threshold accuracy	Over volcanic ash cases
CLOUDS				
Aircraft Icing Threat	Day and night	Quantitative out to at least 60 degrees LZA and qualitative beyond	Clear conditions associated with threshold accuracy	Over specified geographic area
Cloud Ice Water Path	Day and night	Quantitative out to at least 65 degrees LZA and qualitative beyond	In presence of limited clouds with optical depths between 1.0 and 60 (day)	Over specified geographic area
Cloud Imagery: Coastal	Day and night	Not applicable	In presence of clear air and clouds	Over specified geographic area
Cloud Layers / Heights and Thickness	Day and night	Quantitative out to at least 62 degrees LZA and qualitative beyond	In presence of clouds with optical depth > 1. Clear conditions down to cloud top associated with threshold accuracy.	Over specified geographic area
Cloud Liquid Water	Day and night	Quantitative out to at least 65 degrees LZA and qualitative beyond	In presence of limited clouds with optical depths between 2.0 and 60 (day)	Over specified geographic area
Cloud & Moisture Imagery	Day and night	Not applicable	In presence of clear air and clouds	Over specified geographic area
Cloud Optical Depth	Day and night	Quantitative out to at least 65 degrees LZA and qualitative beyond	In presence of clouds with optical depth > 1	Over specified geographic area
Cloud Particle Size Distribution	Day and night	Day and night; quantitative out to at least 65 degrees LZA and qualitative beyond	In presence of clouds with optical depths >2 and <60	Over specified geographic area
Cloud Top Phase	Day and night	Quantitative out to at least 65 degrees LZA and qualitative beyond	In presence of clouds with optical depth > 1. Clear conditions down to cloud top associated with threshold accuracy.	Over specified geographic area
Cloud Top Height	Day and night	Quantitative out to at least 62 degrees LZA and qualitative beyond	Clear conditions associated with threshold accuracy.	Over specified geographic area
Cloud Top Pressure	Day and night	Quantitative out to at least 62 degrees LZA and qualitative beyond	In presence of clouds with optical depth > 1. Clear conditions down to cloud top associated with threshold accuracy.	Over specified geographic area
Cloud Top Temperature	Day and night	Quantitative out to at least 65 degrees LZA and qualitative beyond	In presence of clouds with optical depth > 1. Clear conditions down to cloud top associated with threshold accuracy.	Over specified geographic area
Cloud Type	Day and night	Quantitative out to at least 65 degrees LZA and qualitative beyond	In presence of clouds with optical depth > 1. Clear conditions down to cloud top associated with threshold accuracy.	Over specified geographic area
Convective Initiation	Day and night	Quantitative out to at least 65 degrees LZA and qualitative beyond	Clear conditions down to feature of interest associated with threshold accuracy	Over specified geographic area

Check the VSDE at <https://vsde.nasa.gov/vsde/portal> to verify correct version prior to use.

Appendix A Table 2: Product Qualifiers				
Observational Requirements	Temporal Coverage Qualifiers (Threshold)	Product Extent Qualifier (Threshold)	Cloud Cover Conditions Qualifier (Threshold)	Product Statistics Qualifier (Threshold)
Enhanced "V" / Overshooting Top Detection	Day and night	Quantitative out to at least 65 degrees LZA and qualitative beyond	Clear conditions down to feature of interest associated with threshold accuracy	Over enhanced V / overshooting top cases
Hurricane Intensity	Day and night	Quantitative out to at least 65 degrees LZA and qualitative beyond	Clear conditions down to feature of interest associated with threshold accuracy	Over hurricane cases
Lightning Detection: 1) Events and 2)Flashes	Day and night	Quantitative out to at least 65 degrees LZA and qualitative beyond	Cloud cover conditions permitting observation of lightning associated with threshold accuracy	Over lightning cases
Low Cloud and Fog	Day and night	Quantitative out to at least 70 degrees LZA and qualitative beyond	Clear conditions down to feature of interest (no high clouds obscuring fog) associated with threshold accuracy	Over low cloud and fog cases with at least 42% occurrence in the region
Turbulence	Day and night	Quantitative out to at least 70 degrees LZA and qualitative beyond	Clear conditions down to feature of interest associated with threshold accuracy	Over turbulence cases with at least 25% occurrence in surrounding regions
Visibility	Day	Quantitative out to at least 70 degrees LZA and qualitative beyond	Clear conditions down to feature of interest associated with threshold accuracy	Over specified geographic area
PRECIPITATION				
Probability of Rainfall	Day and night	Quantitative out to at least 70 degrees LZA and qualitative beyond	N/A	Over rain cases and mesoscale-sized surrounding regions
Rainfall Potential	Day and night	Quantitative out to at least 70 degrees LZA and qualitative beyond	N/A	Over rainfall cases
Rainfall Rate/QPE	Day and night	Quantitative out to at least 70 degrees LZA and qualitative beyond	N/A	Over rain cases and mesoscale-sized surrounding regions
PROFILES				
Legacy Vertical Moisture Profile	Day and night	Quantitative out to at least 62 degrees LZA and qualitative beyond	Clear conditions associated with threshold accuracy	Over specified geographic area
Legacy Vertical Temperature Profile	Day and night	Quantitative out to at least 62 degrees LZA and qualitative beyond	Clear conditions associated with threshold accuracy	Over specified geographic area
Derived Stability Indices (5 indices: CAPE, Lifted Index, K-index, Showalter Index, Total Totals)	Day and night	Quantitative out to at least 62 degrees LZA and qualitative beyond and qualitative beyond	Clear conditions associated with threshold accuracy	Over specified geographic area
Total Precipitable Water	Day and night	Quantitative out to at least 62 degrees LZA and qualitative beyond	Clear conditions down to feature of interest associated with threshold accuracy	Over specified geographic area
Total Water Content	Day and night	Quantitative out to at least 62 degrees LZA and qualitative beyond	Only clear regions and optically thin, single layer clouds associated with threshold accuracy	Over specified geographic area
RADIANCES				
Clear Sky Masks	Day and night	Quantitative out to at least 70 degrees LZA and qualitative beyond	Clear conditions associated with threshold accuracy	Over specified geographic area
Radiances	Day and night	Quantitative out to at least 70 degrees LZA and qualitative beyond	Clear conditions associated with threshold accuracy	Over specified geographic area
RADIATION				
Absorbed Shortwave Radiation: Surface	Day	Quantitative out to at least 70 degrees LZA and qualitative beyond	Clear conditions associated with threshold accuracy	Over specified geographic area
Downward Longwave Radiation: Surface	Day and night	Quantitative out to at least 70 degrees LZA and qualitative beyond	Not applicable	Over specified geographic area

Check the VSDE at <https://vsde.nasa.gov/vsde/portal> to verify correct version prior to use.

Appendix A Table 2: Product Qualifiers				
Observational Requirements	Temporal Coverage Qualifiers (Threshold)	Product Extent Qualifier (Threshold)	Cloud Cover Conditions Qualifier (Threshold)	Product Statistics Qualifier (Threshold)
Downward Solar Insolation: Surface	Day for SZA values greater than 25 degrees	Quantitative out to at least 70 degrees LZA and qualitative beyond	Not applicable	Over specified geographic area
Reflected Solar Insolation: TOA	Day	Quantitative out to at least 70 degrees LZA	Clear conditions associated with threshold accuracy	Over specified geographic area
Upward Longwave Radiation: Surface	Day and night	Quantitative out to at least 62 degrees LZA and qualitative beyond	Clear conditions associated with threshold accuracy	Over specified geographic area
Upward Longwave Radiation: TOA	Day and night	Quantitative out to at least 62 degrees LZA and qualitative beyond	Clear conditions associated with threshold accuracy	Over specified geographic area
TRACE GASES				
Ozone Total	Day and night	Quantitative out to at least 65 degrees LZA and qualitative beyond	Clear conditions associated with threshold accuracy	Over specified geographic area
SO2 Detection	Day and night	Quantitative out to at least 70 degrees LZA and qualitative beyond	Clear conditions associated with threshold accuracy	Over specified geographic area
WINDS				
Derived Motion Winds	Day and night	Quantitative out to at least 62 degrees LZA and qualitative beyond	Clear conditions down to feature of interest associated with threshold accuracy	Over specified geographic area
Observational Requirements: LAND				
Fire / Hot Spot Characterization:	Day and night	Quantitative out to at least 65 degrees LZA and qualitative beyond	If feature is obscured by thick clouds, product will not meet threshold measurement accuracy	Over specified geographic area
Flood/Standing Water	Day with Sun at 67 degree solar zenith angle	Quantitative out to at least 67 degrees LZA and qualitative beyond	Clear conditions associated with threshold accuracy	Over specified geographic area
Ice Cover/ Landlocked	Day with Sun at 67 degree solar zenith angle	Quantitative out to at least 67 degrees LZA and qualitative beyond	Clear conditions associated with threshold accuracy	Over specified geographic area
Land Surface (Skin) Temperature	Day and night	Quantitative out to at least 70 degrees LZA and qualitative beyond	Clear conditions associated with threshold accuracy	Over specified geographic area
Snow Cover	Sun at 67 degree daytime solar zenith angle	Quantitative out to at least 55 degrees LZA and qualitative beyond	Clear conditions associated with threshold accuracy	Over specified geographic area
Snow Depth	Sun at 67 degree daytime solar zenith angle	Quantitative out to at least 70 degrees LZA and qualitative beyond	Clear conditions associated with threshold accuracy	Over specified geographic area
Surface Albedo	Sun at 67 degree daytime solar zenith angle	Quantitative out to at least 70 degrees LZA and qualitative beyond	Clear conditions associated with threshold accuracy	Over specified geographic area
Surface Emissivity	Sun at 67 degree daytime solar zenith angle	Quantitative out to at least 70 degrees LZA	Clear conditions associated with threshold accuracy	Over specified geographic area
Vegetation Fraction: Green	Sun at 67 degree daytime solar zenith angle	Quantitative out to at least 55 degrees LZA and qualitative beyond	Clear conditions associated with threshold accuracy	Over specified geographic area
Vegetation Index	Sun at 67 degree daytime solar zenith angle	Quantitative out to at least 70 degrees LZA and qualitative beyond	Clear conditions associated with threshold accuracy	Over specified geographic area
Observational Requirements: OCEAN				
Currents	Day and night	Quantitative out to at least 67 degrees LZA and qualitative at larger LZA	Clear conditions associated with threshold accuracy	Over specified geographic area
Currents: Offshore	Day and night	Quantitative out to at least 67 degrees LZA and qualitative at larger LZA	Clear conditions associated with threshold accuracy	Over specified geographic area
Sea & Lake Ice: Age	Sun out to 67 degree daytime solar zenith angle	Quantitative out to at least 67 degrees LZA and qualitative at larger LZA	Clear conditions associated with threshold accuracy	Over specified geographic area

Check the VSDE at <https://vsde.nasa.gov/vsde/portal> to verify correct version prior to use.

Appendix A Table 2: Product Qualifiers				
Observational Requirements	Temporal Coverage Qualifiers (Threshold)	Product Extent Qualifier (Threshold)	Cloud Cover Conditions Qualifier (Threshold)	Product Statistics Qualifier (Threshold)
Sea & Lake Ice: Concentration	Sun out to 67 degree daytime solar zenith angle	Quantitative out to at least 67 degrees LZA and qualitative at larger LZA	Clear conditions associated with threshold accuracy	Over specified geographic area
Sea & Lake Ice: Extent	Sun out to 67 degree daytime solar zenith angle	Quantitative out to at least 67 degrees LZA and qualitative at larger LZA	Clear conditions associated with threshold accuracy	Over specified geographic area
Sea & Lake Ice: Motion	Sun out to 67 degree daytime solar zenith angle	Quantitative out to at least 67 degrees LZA and qualitative at larger LZA	Clear conditions associated with threshold accuracy	Over specified geographic area
Sea Surface Temps	Day and night	Quantitative out to at least 67 degrees LZA and qualitative at larger LZA	Clear conditions associated with threshold accuracy	Over specified geographic area
Observational Requirements: SPACE AND SOLAR

Solar Imagery: X-Ray	1	B	NetCDF FITS	2	Yes	1b	0.0-1.3 Solar Radii	7.0 arcsec	Stability during 24 hours: 1.0 arcmin of sun center (N-S, E-W) (1 sigma)- 3.0 arcmin of sun center (N-S, E-W) (3 sigma) & Stability during 60 seconds: 2.0 arc seconds of sun center (E-W, N-S) (1 sigma)- 6.0 arcsec of sun center (E-W, N-S) (3 sigma)	+/-2.5 arcsec	Radiance: 0.3-10^6 ph/cm2/arcsec/sec & Temperature: 1 to 10 MK	+/-40% in radiance	Image: <2 min & Temp: < 6 min	Image: <2 min & Temp: < 6 min	<50 sec	<50 sec	+/-40% in radiance	Space & Solar	Solar

NOTE: There are 54 KPP Cloud and Moisture Imagery End-Products (48 single band End-Products in NETCDF format at the resolution native to each band and one multiband product at 2 km resolution in both NETCDF & McIDAS Area file formats). This number is arrived at as follows:

Single band products: 16 products * 1 format (NETCDF) * 3 coverage areas (Full Disk, CONUS, Mesoscale)

Multiband products: 1 product * 2 formats (NETCDF and McIDAS Area)* 3 coverage areas (Full Disk, CONUS, Mesoscale) (CCR01313, CCR01368)

NOTE: The number of Derived Motion Winds End-Products is derived from 6 unique outputs multiplied by 3 coverage areas in two formats each.

Check the VSDE at <https://vsde.nasa.gov/vsde/portal> to verify correct version prior to use.

10	GOES WEST	West CONUS	Lambert Conformal	5	0.5	0.64	See ABI Performance and Operational Requirements Document, 417-ABIPORD-0017	8 (TBR)	50.0
11	GOES WEST	West CONUS	Lambert Conformal	5	1	0.47, 0.865, 0.161	See ABI Performance and Operational Requirements Document, 417-ABIPORD-0017	8 (TBR)	50.0
12	GOES WEST	West CONUS	Lambert Conformal	5	2	1.378, 2.25, 3.90, 6.19, 6.95 7.34, 8.5, 9.61, 10.35, 11.2, 12.3, 13.3	See ABI Performance and Operational Requirements Document, 417-ABIPORD-0017	8 (TBR)	50.0
13	GOES WEST	Mesoscale (Flexible 1000 x 1000 km)	Lambert Conformal	0.5	0.5	0.64	N/A	8 (TBR)	23.0
14	GOES WEST	Mesoscale (Flexible 1000 x 1000 km)	Lambert Conformal	0.5	1	0.47, 0.865, 0.161	N/A	8 (TBR)	23.0
15	GOES WEST	Mesoscale (Flexible 1000 x 1000 km)	Lambert Conformal	0.5	2	1.378, 2.25, 3.90, 6.19, 6.95 7.34, 8.5, 9.61, 10.35, 11.2, 12.3, 13.3	N/A	8 (TBR)	23.0
16	GOES WEST	Alaska Region (N&W of CONUS)	Polar Stereographic	15	0.5	0.64	See ABI Performance and Operational Requirements Document, 417-ABIPORD-0017	8 (TBR)	50.0
17	GOES WEST	Alaska Region (N&W of CONUS)	Polar Stereographic	15	1	0.47, 0.865, 0.161	See ABI Performance and Operational Requirements Document, 417-ABIPORD-0017	8 (TBR)	50.0
18	GOES WEST	Alaska Region (N&W of CONUS)	Polar Stereographic	15	2	1.378, 2.25, 3.90, 6.19, 6.95 7.34, 8.5, 9.61, 10.35, 11.2, 12.3, 13.3	See ABI Performance and Operational Requirements Document, 417-ABIPORD-0017	8 (TBR)	50.0
19	GOES WEST	Full Disk	Mercator	15	0.5	0.64	Lower Left: 75S 153E Lower Right: 75S 57W Upper Right: 75N 57W Upper Left: 75N 153E	8 (TBR)	50.0

Appendix E: AWIPS Sectorized Product Set Characteristics									
Sectorized Product ID	Satellite Orbital Slot	Sector	Map Projection	Refresh (Full Disk: Mode 3: 15 Min Mode 4: 5 Min) (minutes)	Resolution (km)	ABI Bands Used (central wavelength, micrometer)	Corner Points For Full Disk- Based on +/- E/W 70 degrees from station longitude For Alaska Region - Current Reference longitude at 150W	Bit Depth	Latency (s)
20	GOES WEST	Full Disk	Mercator	15	1	0.47, 0.865, 0.161	Lower Left: 75S 153E Lower Right: 75S 57W Upper Right: 75N 57W Upper Left: 75N 153E	8 (TBR)	50.0
21	GOES WEST	Full Disk	Mercator	15	2	1.378, 2.25, 3.90, 6.19, 6.95 7.34, 8.5, 9.61, 10.35, 11.2, 12.3, 13.3	Lower Left: 75S 153E Lower Right: 75S 57W Upper Right: 75N 57W Upper Left: 75N 153E	8 (TBR)	50.0

Note: Sectorized Product Latencies are contained within the same Vendor-Allocated Ground Latency as Appendix A and D Cloud and Moisture Imagery latency.
